Health

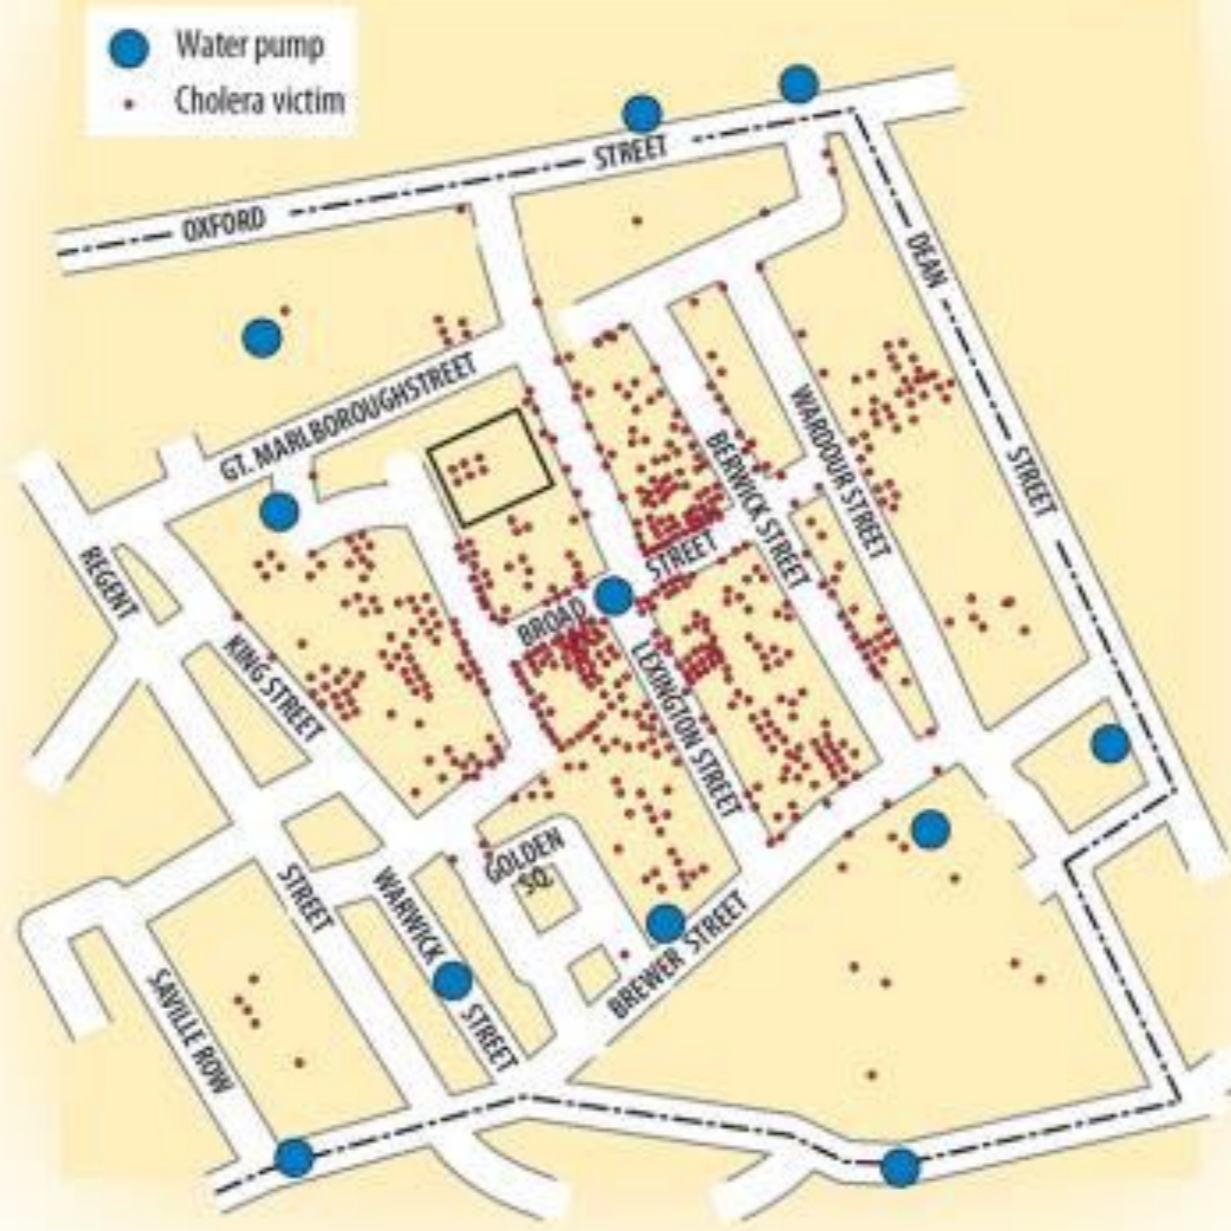

# I. The Epidemiologic Transition

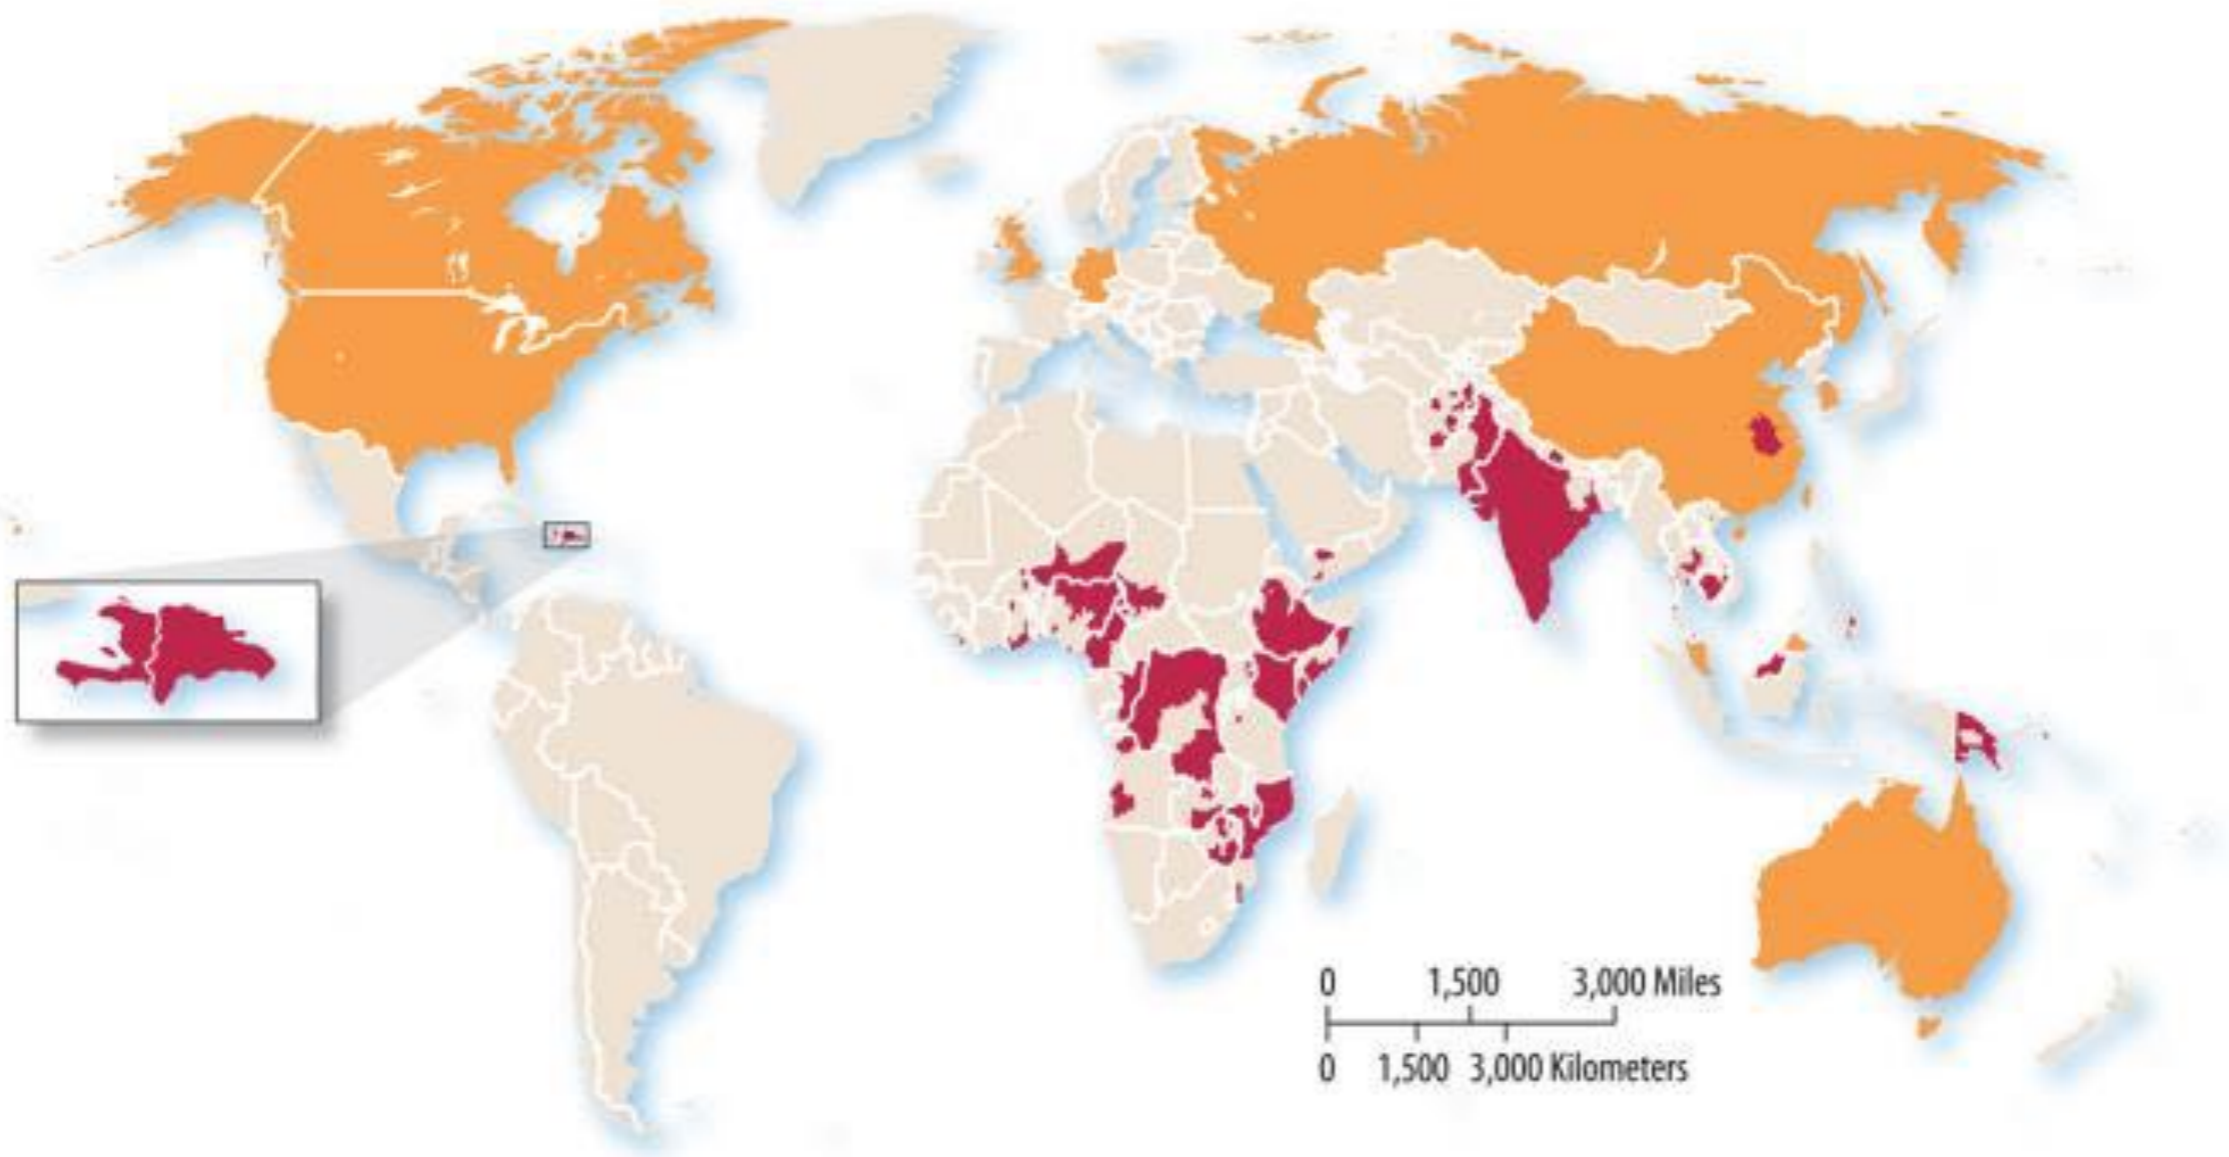

- A. Stage 1: Pestilence & Famine (High CDR)
  - 1. Infectious and parasitic diseases are the principal causes of human deaths, along with accidents and attacks by animals and other humans.
  - 2. History's most violent stage 1 epidemic was the [Black Plague](#) (bubonic plague), which was probably transmitted to humans by disease from migrating infected rats.

- **B. Stage 2: Receding Pandemics (Rapidly Declining CDR)**
  - 1. A pandemic is disease that occurs over a wide geographic area and affects a very high proportion of the population.
  - 2. Cholera, contracted primarily from exposure to contaminated water, has been a troubling pandemic during the early years of stage 2 of the demographic transition.

What is the difference between endemic,  
epidemic, & pandemic?

- 3. Cholera and Early GIS
  - a. British physician Dr. John Snow fought a cholera pandemic with a handmade map that anticipates GIS by more than a century.
  - b. Dr. Snow showed that a large percentage of cholera victims were clustered around one pump, on Broad Street.

**Cholera outbreaks, 2010–2011**

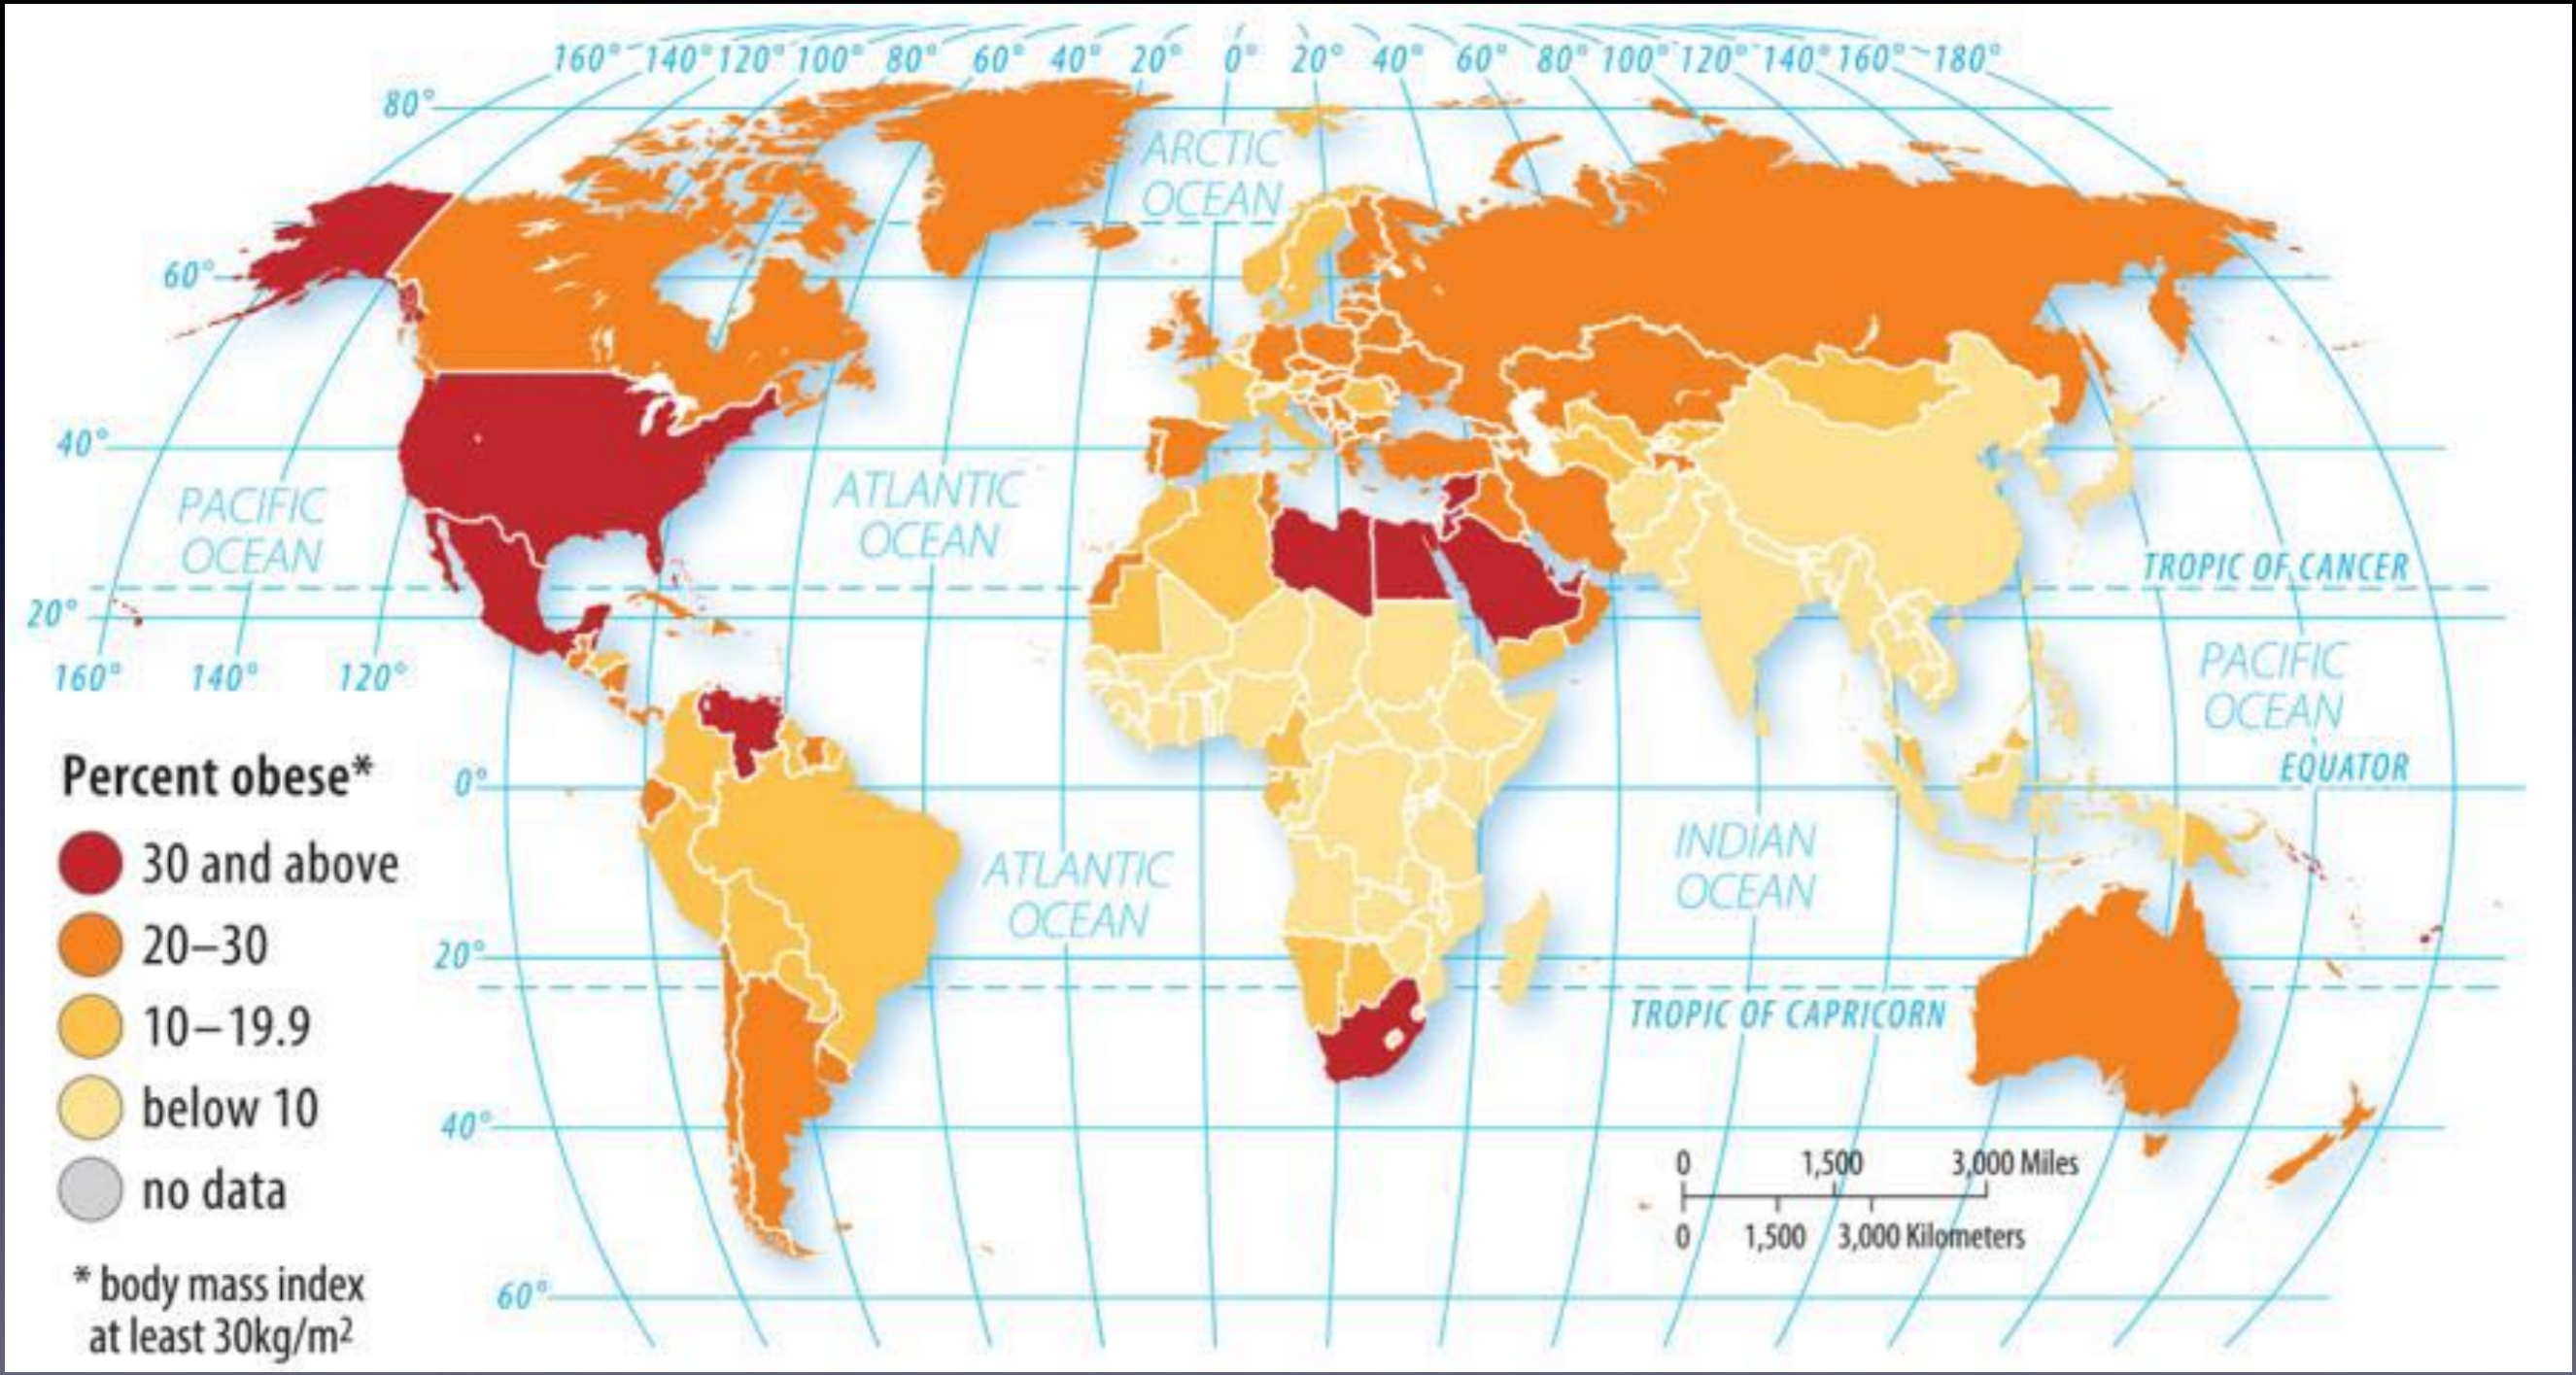

- Areas reporting outbreaks
- Countries to which cholera diffused

- **C. Stage 3: Degenerative Diseases (Moderately Declining CDR)**
  - 1. This is characterized by a decrease in deaths from infectious diseases and an increase in chronic disorders associated with aging.
  - 2. The two especially important chronic disorders in stage 3 are cardiovascular diseases, such as heart attacks, and various forms of cancer.

- **D. Stage 4: Delayed Degenerative Diseases (Low but Increasing CDR)**
  - **1. Cardiovascular diseases and cancers linger, but the life expectancy of older people is extended through medical advances.**
  - **2. Consumption of non-nutritious food and sedentary behavior have resulted in an increase in obesity in stage 4 countries.**

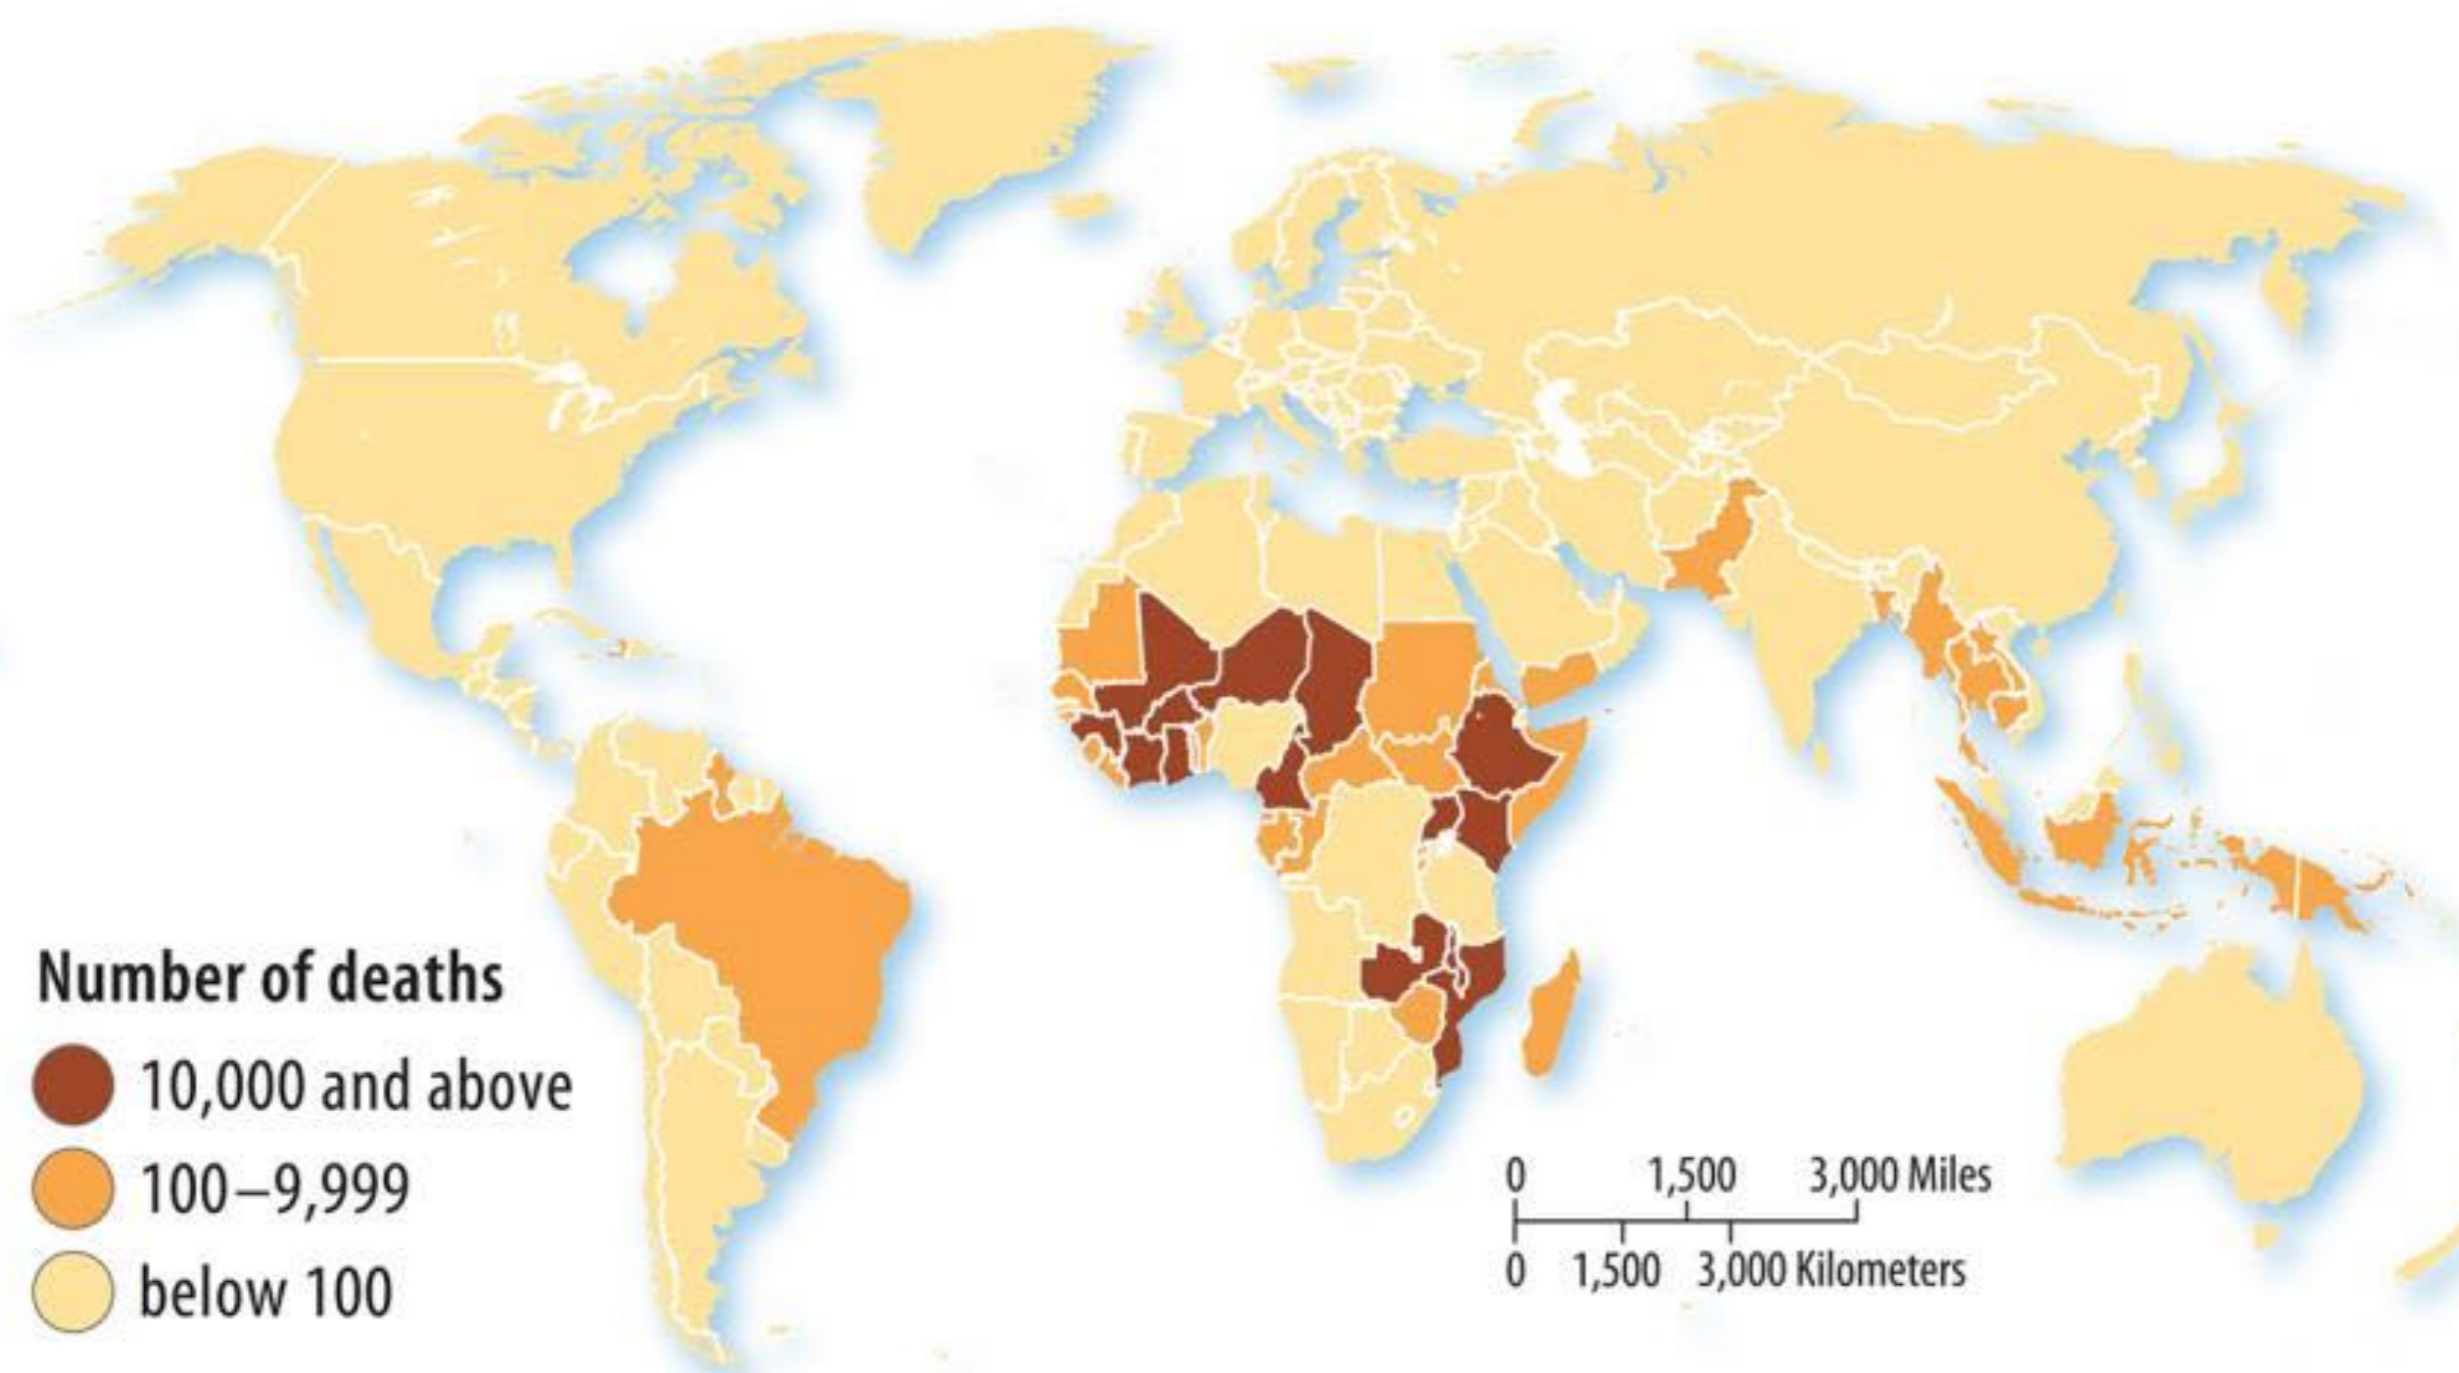

World map showing the percentage of obese people by country. The map uses a color scale from dark red (30% and above) to light yellow (below 10%). Major geographical features like the Arctic Ocean, Atlantic Ocean, Indian Ocean, and Pacific Ocean are labeled, along with the Tropic of Cancer, Equator, and Tropic of Capricorn. A legend in the bottom left explains the color coding, and a scale bar in the bottom right shows distances in miles and kilometers.

- E. Reason for Possible Stage 5: Evolution, & Poverty, Diffusion
  - 1. Infectious disease microbes have continuously evolved and changed in response to environmental pressures by developing resistance to drugs and insecticides.
  - 2. Malaria caused an estimated 620,000 deaths worldwide in 2012 largely due to the evolution of DDT-resistant mosquitoes.

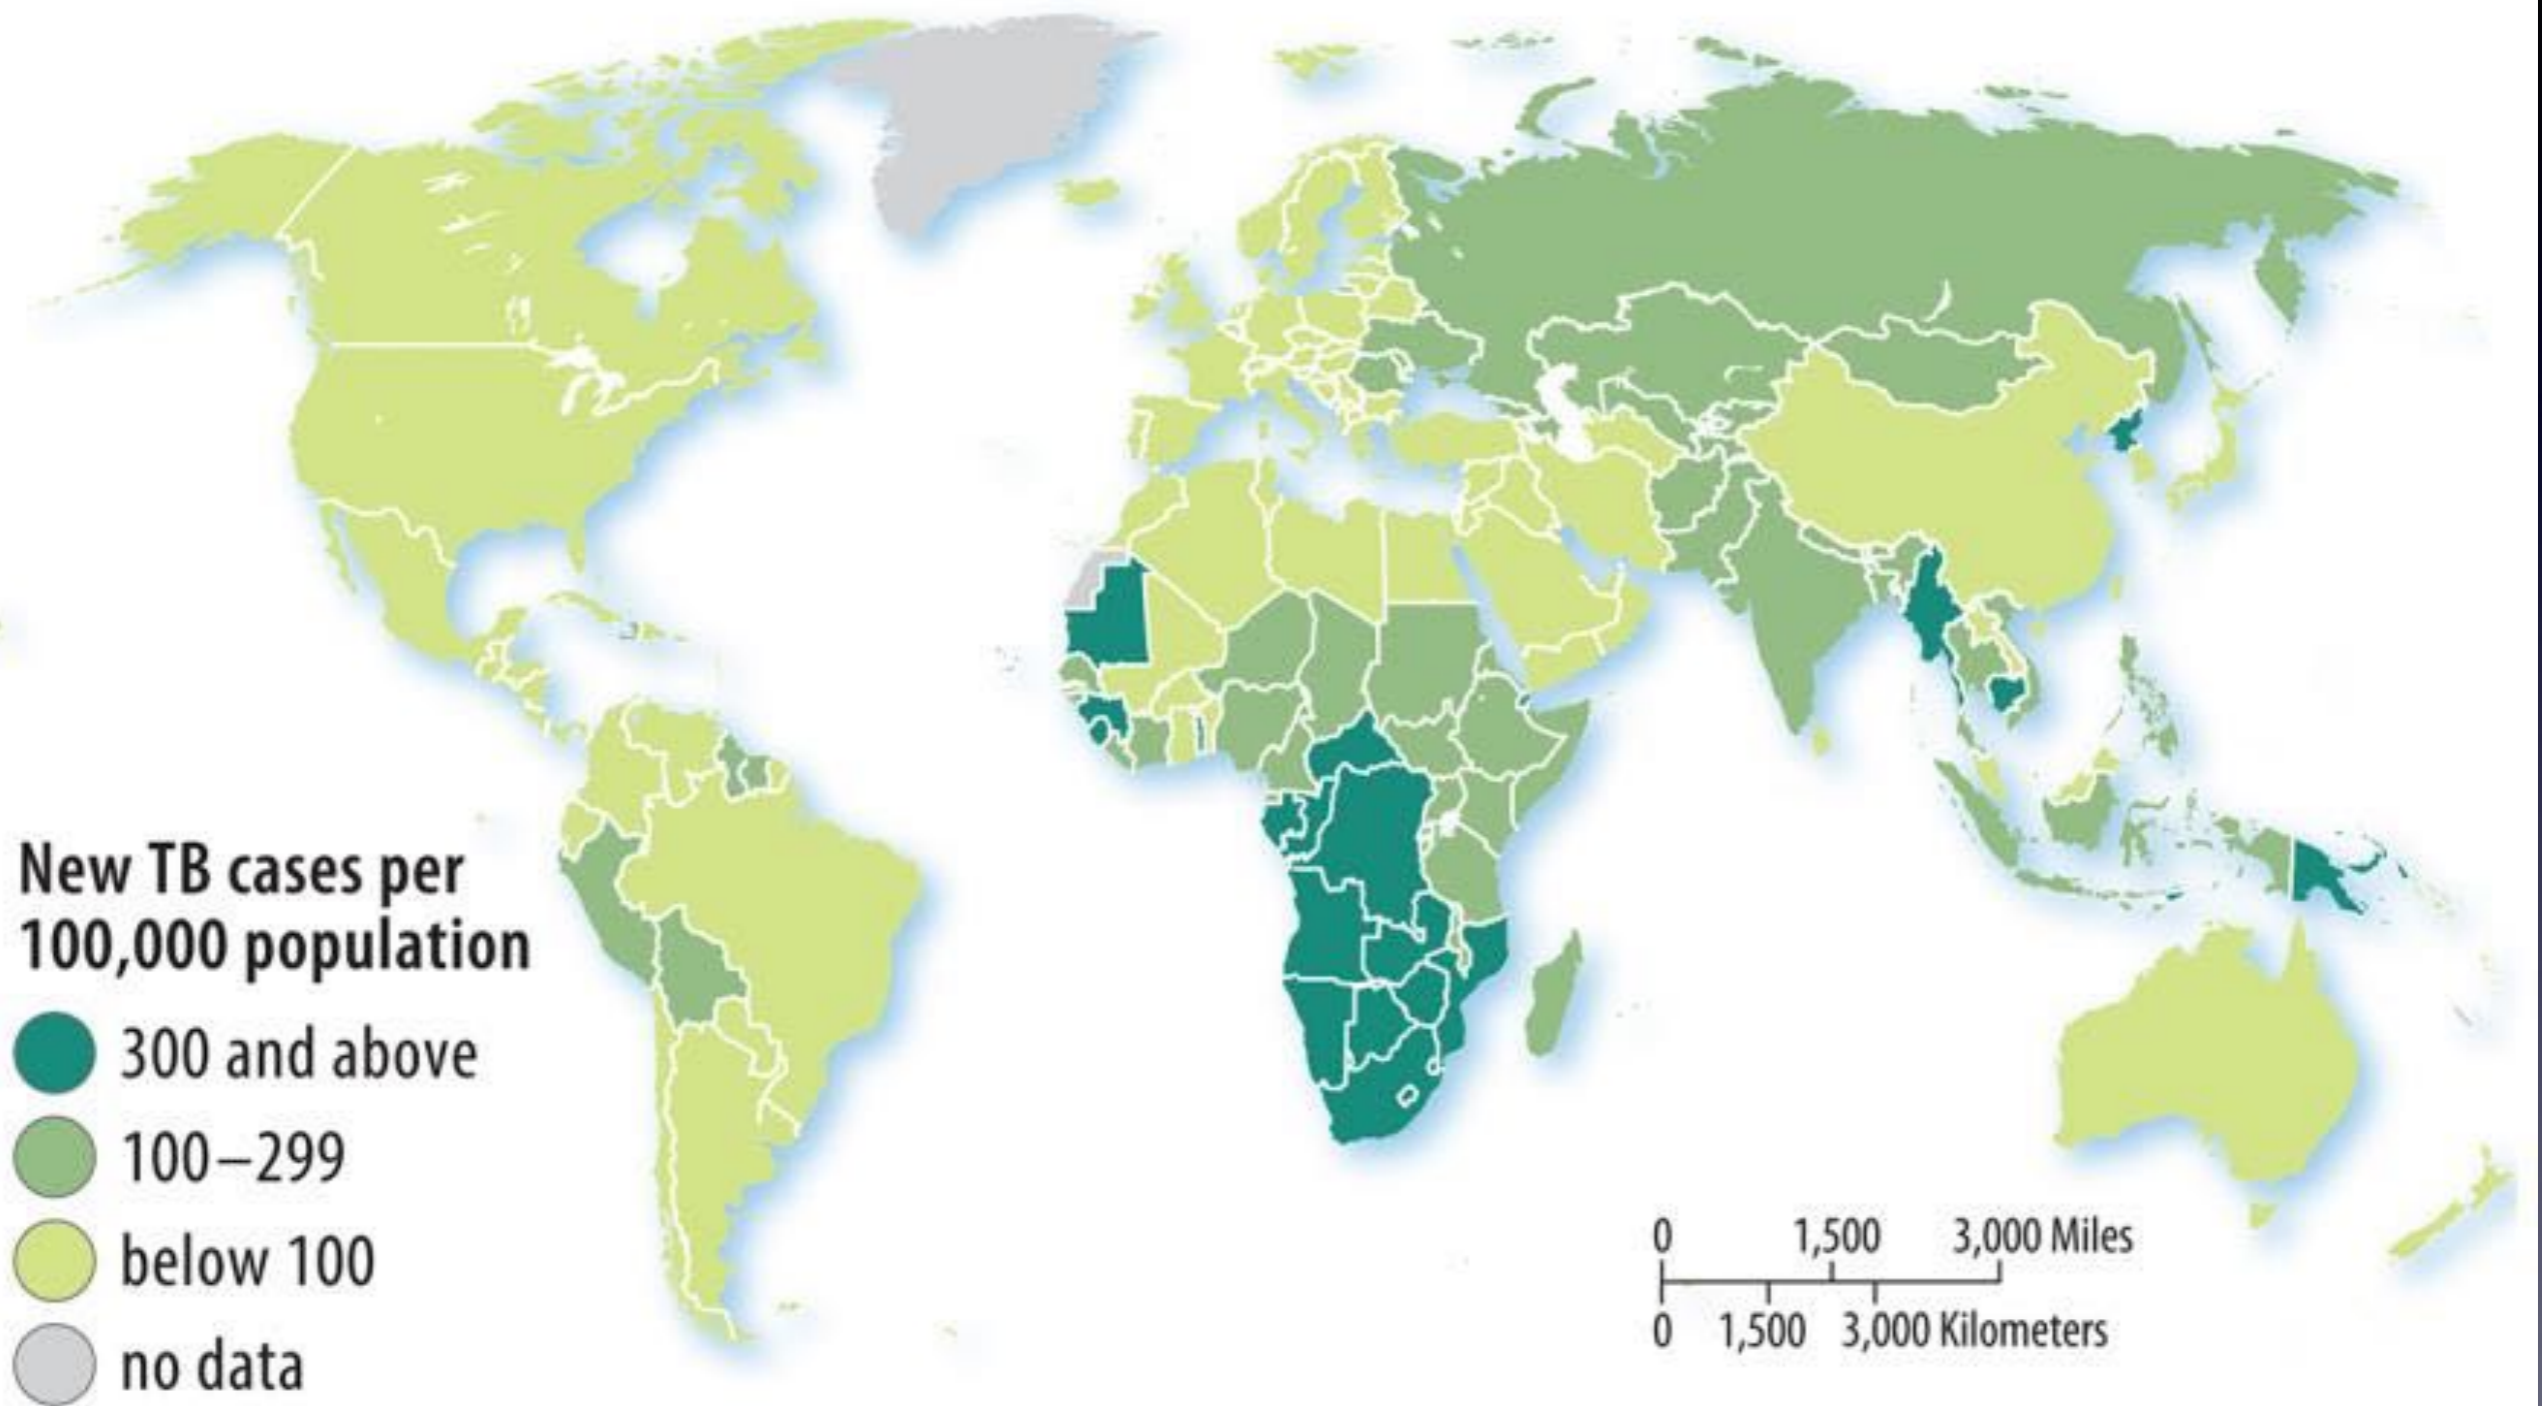

**Number of deaths**

- 10,000 and above
- 100–9,999
- below 100

0 1,500 3,000 Miles  
0 1,500 3,000 Kilometers

- **3. Infectious diseases are more prevalent in poor areas than other places because unsanitary conditions may persist, and most people can't afford the drugs needed for treatment.**
- **4. Tuberculosis (TB) has been largely controlled in developed countries but remains a major cause of death in developing countries.**

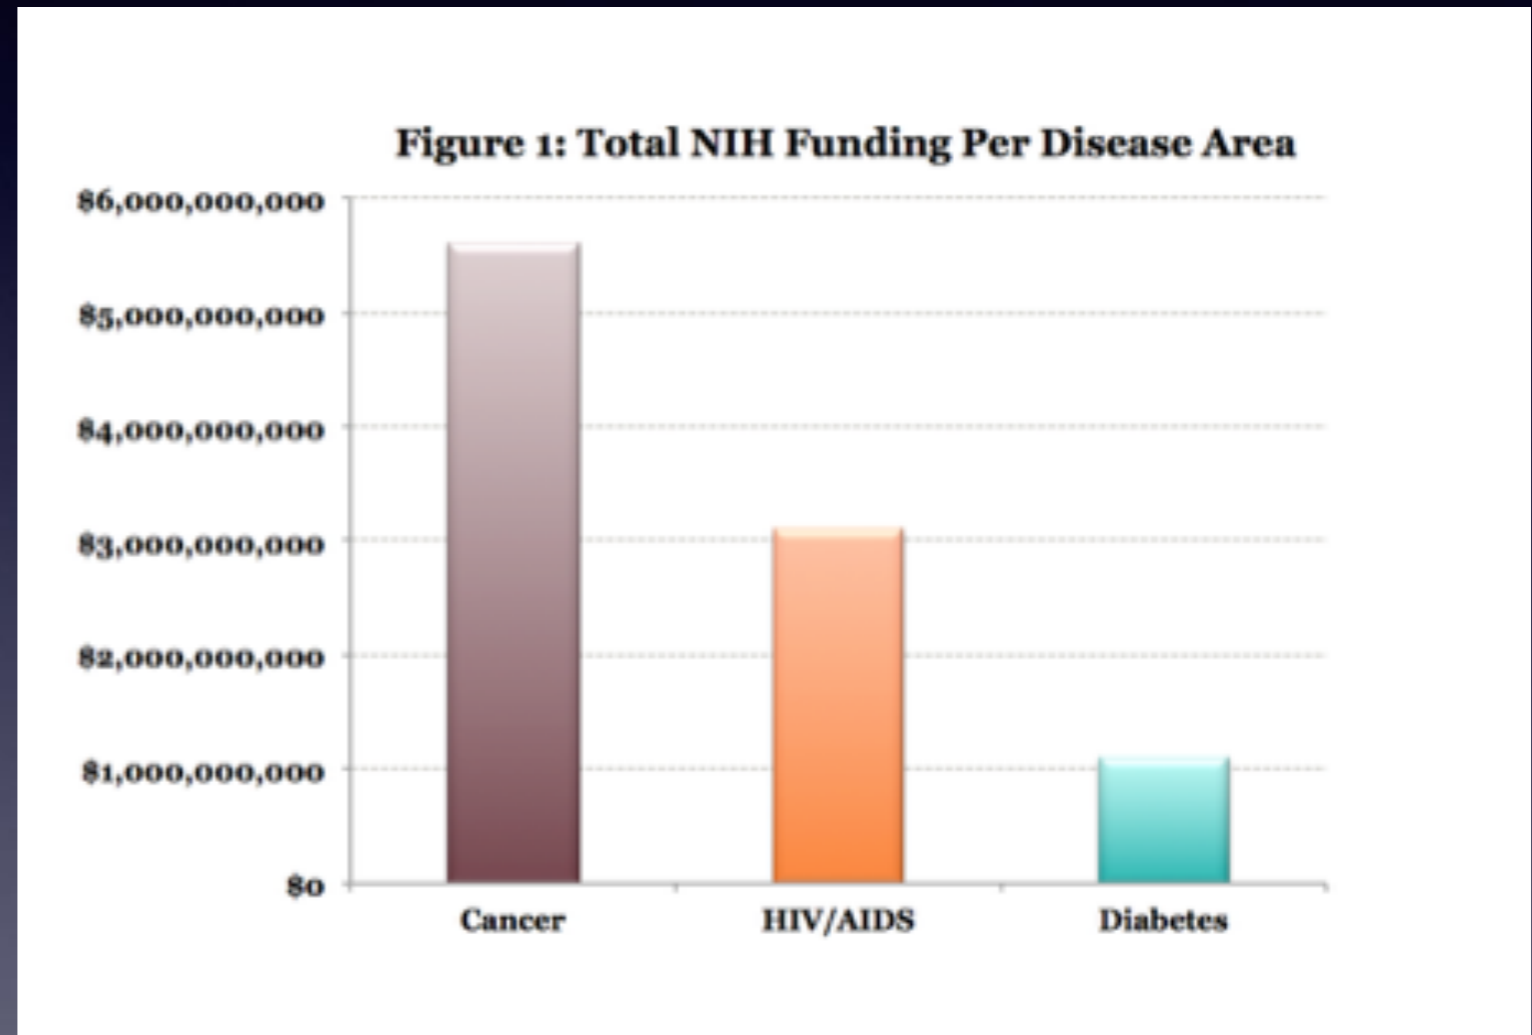

- 5. Pandemics have spread in recent decades through the process of relocation diffusion.
- 6. The most lethal pandemic in recent years has been AIDS (acquired immunodeficiency syndrome).
  - But not in the U.S. despite the media attention to it.

# By The Numbers

- As of 2016, about 675,000 people have died of HIV/AIDS in the USA since the beginning of the HIV epidemic in 1982. Current year expenditures: \$32 billion.

# By The Numbers

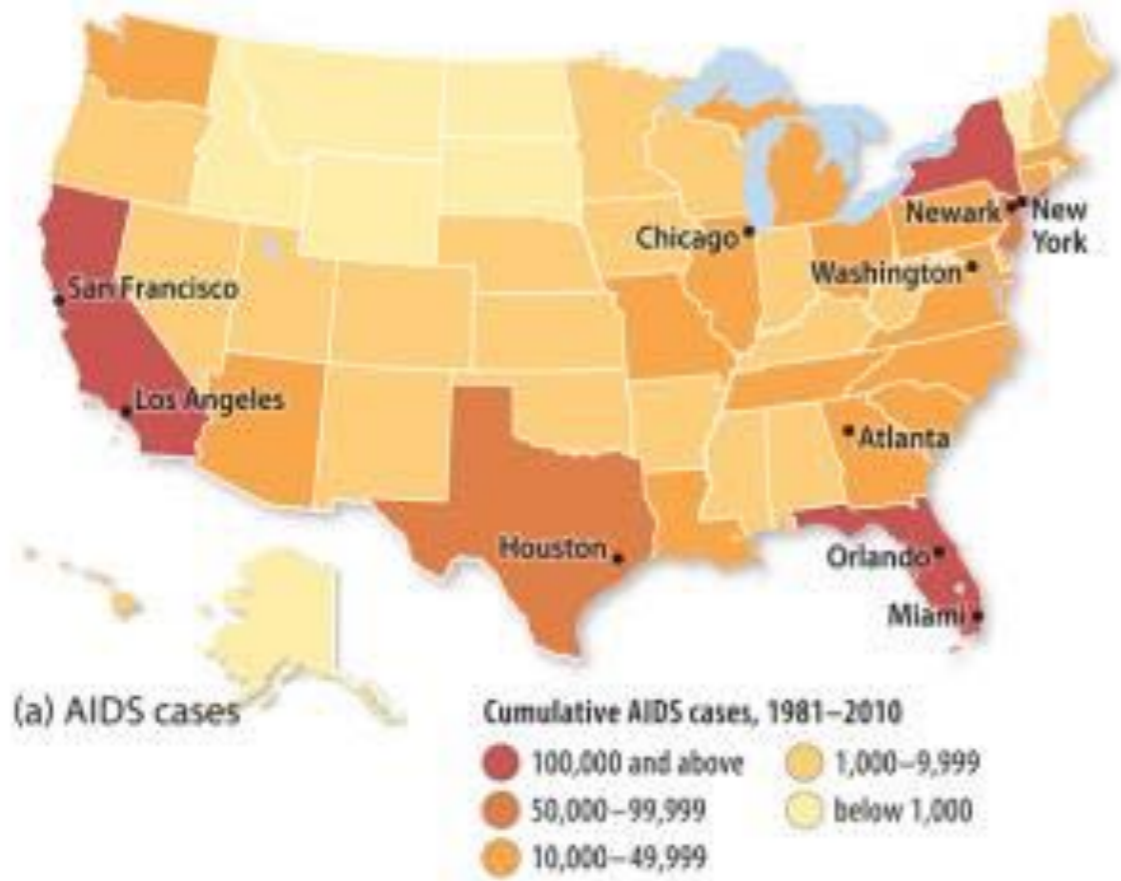

- As of 2012, about 18,000,000 people have died of heart disease in the USA since the beginning of the HIV epidemic in 1982. Current year expenditures: \$32 billion.

# By The Numbers

- As of 2015, 30.3 million Americans – 9.4 percent of the U.S. population – have diabetes

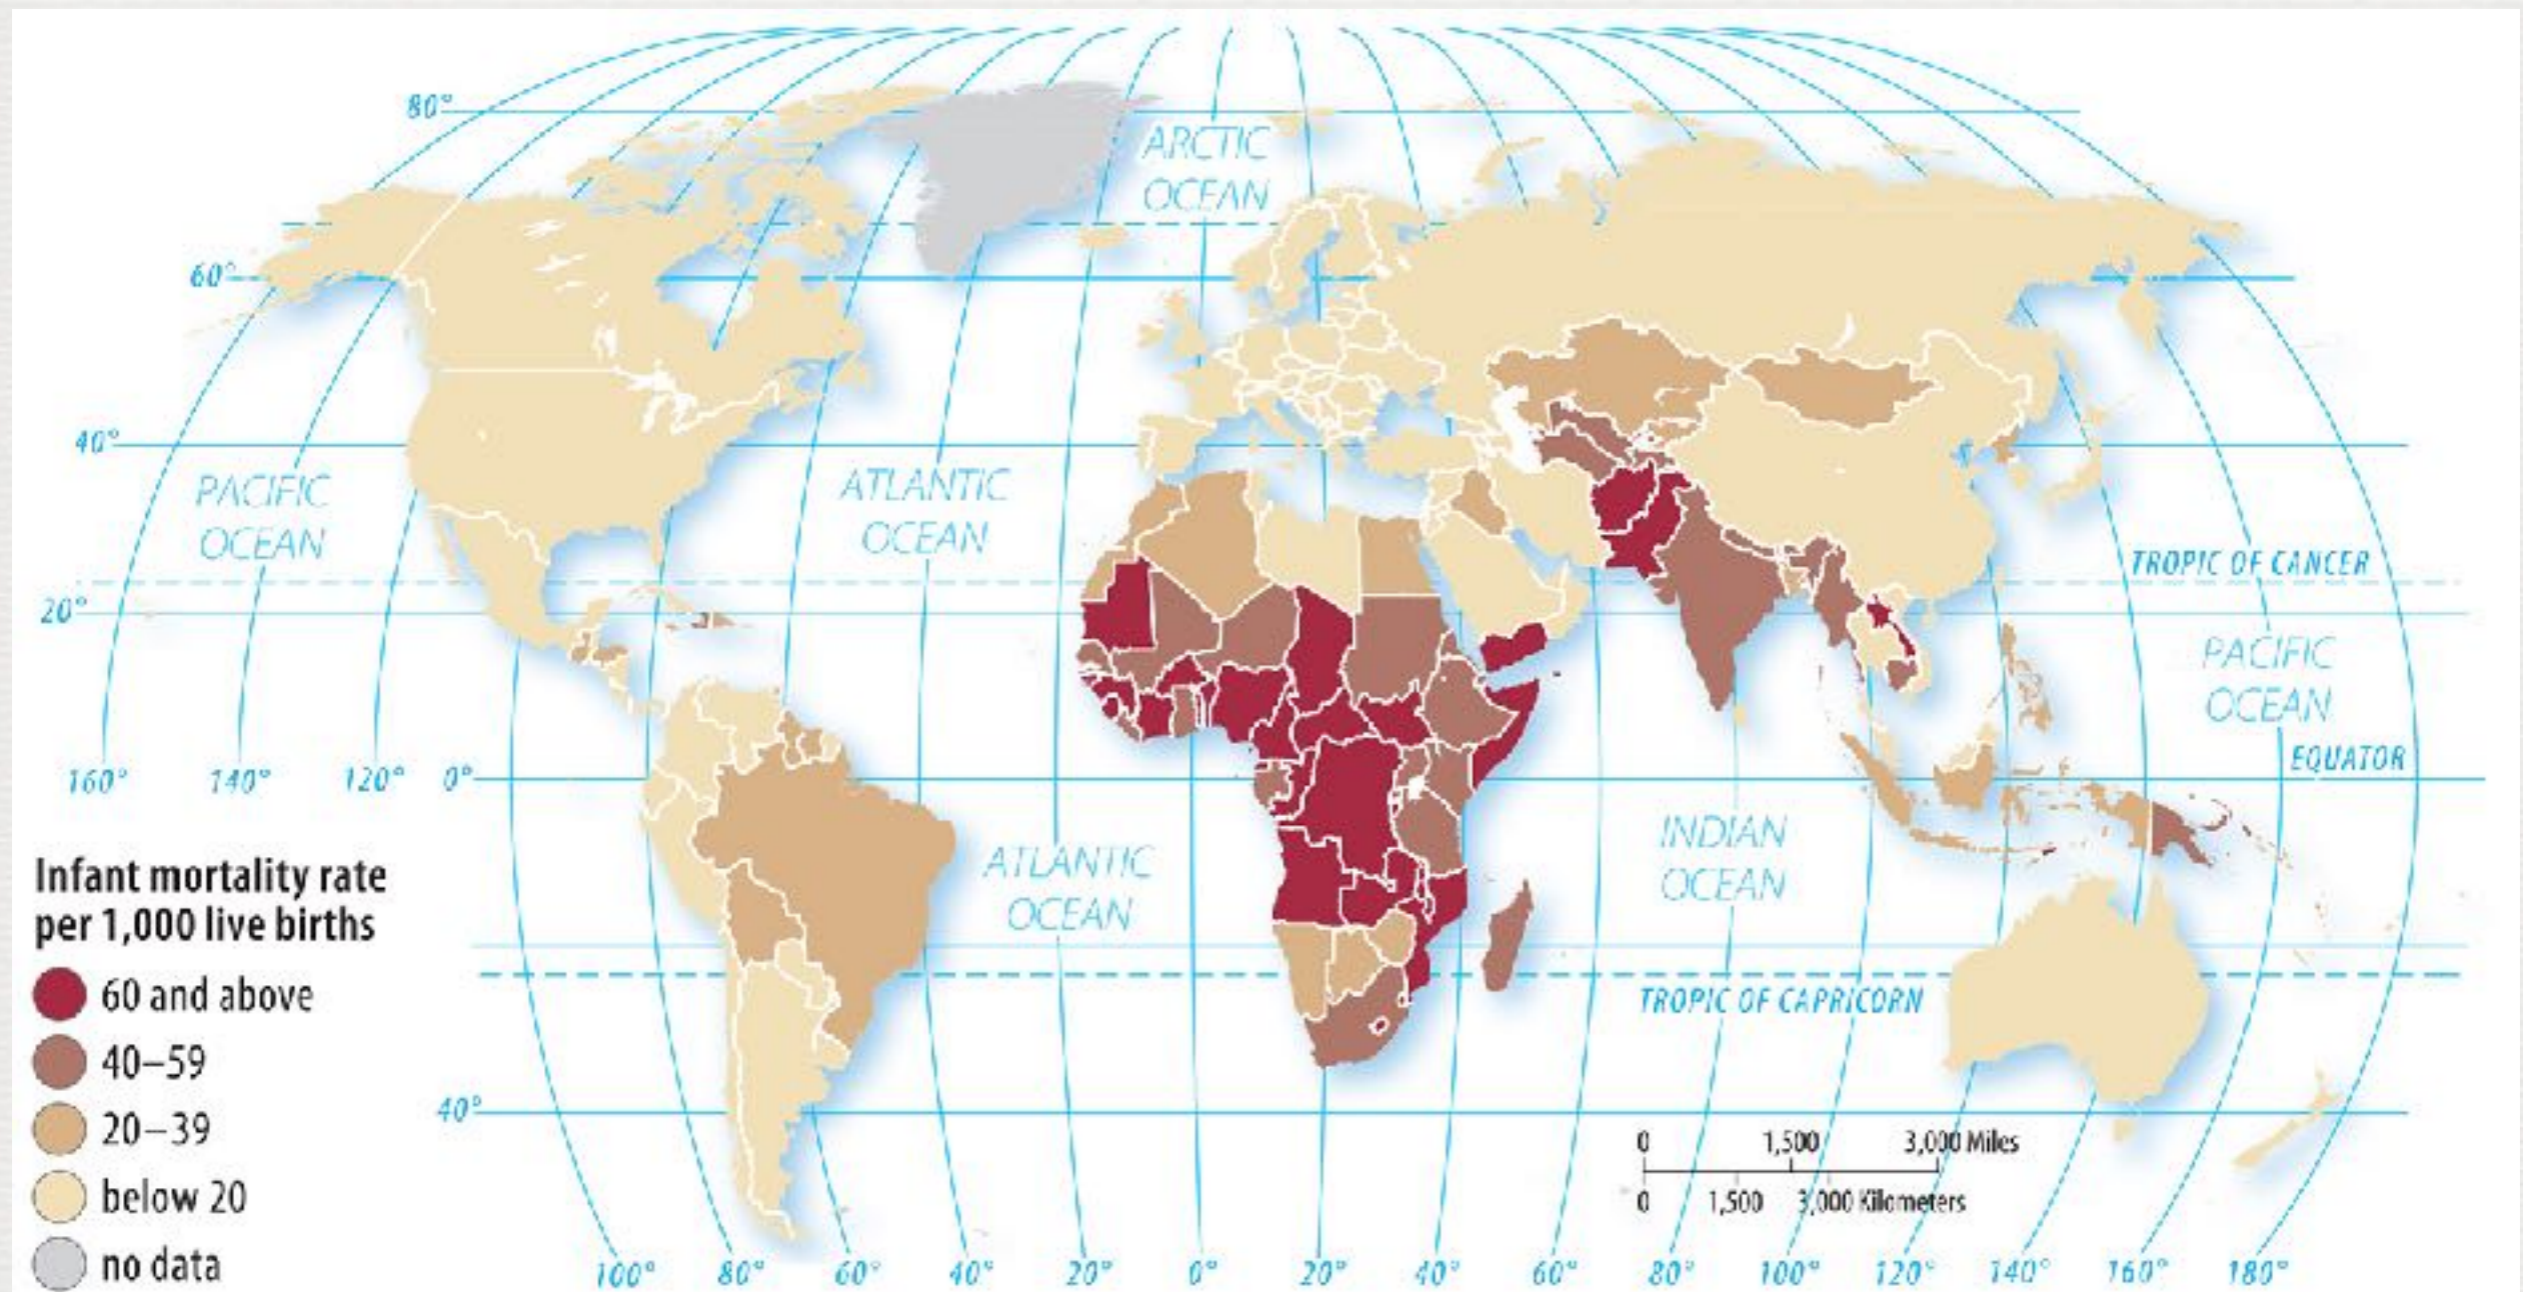

# II. INDICATORS OF HEALTH

- **A. Infant Mortality Rate (IMR)**
  - 1. Annual number of deaths of infants under 1 year of age, compared with live births
    - a. Health care access indicator

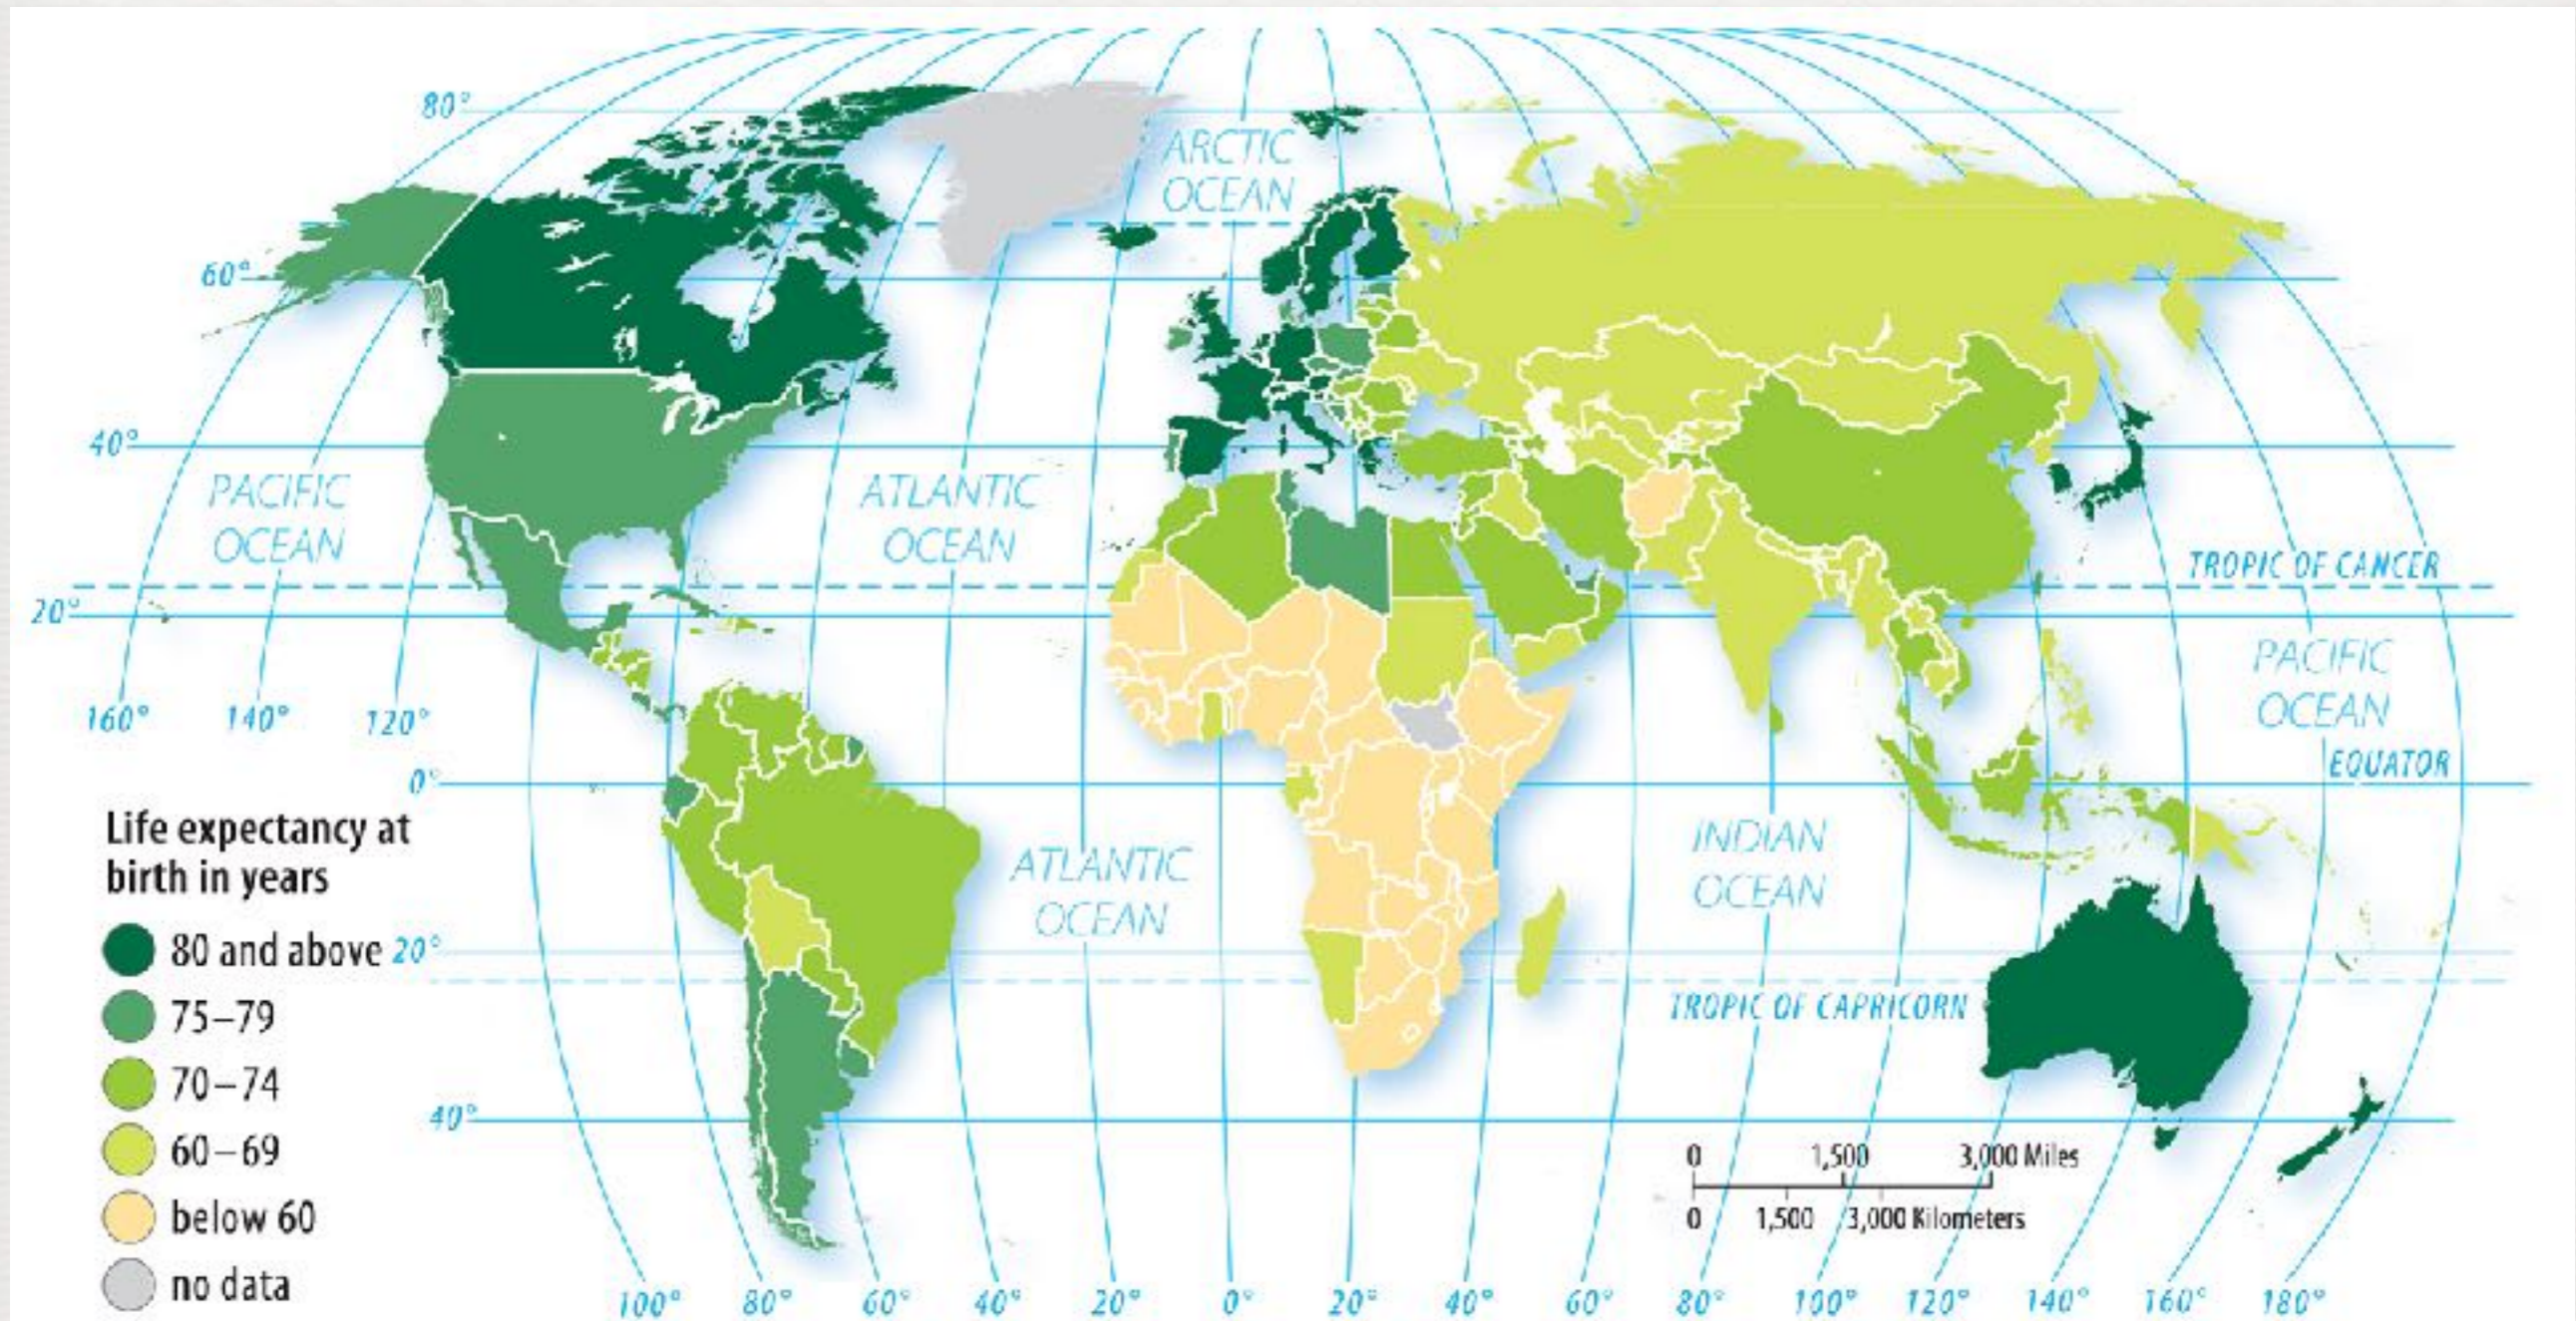

# INFANT MORTALITY RATE

- **B. Life expectancy**

- 1. Number of years a newborn infant can expect to live, assuming current mortality levels
  - a. Health care access and wealth indicator

# LIFE EXPECTANCY AT BIRTH

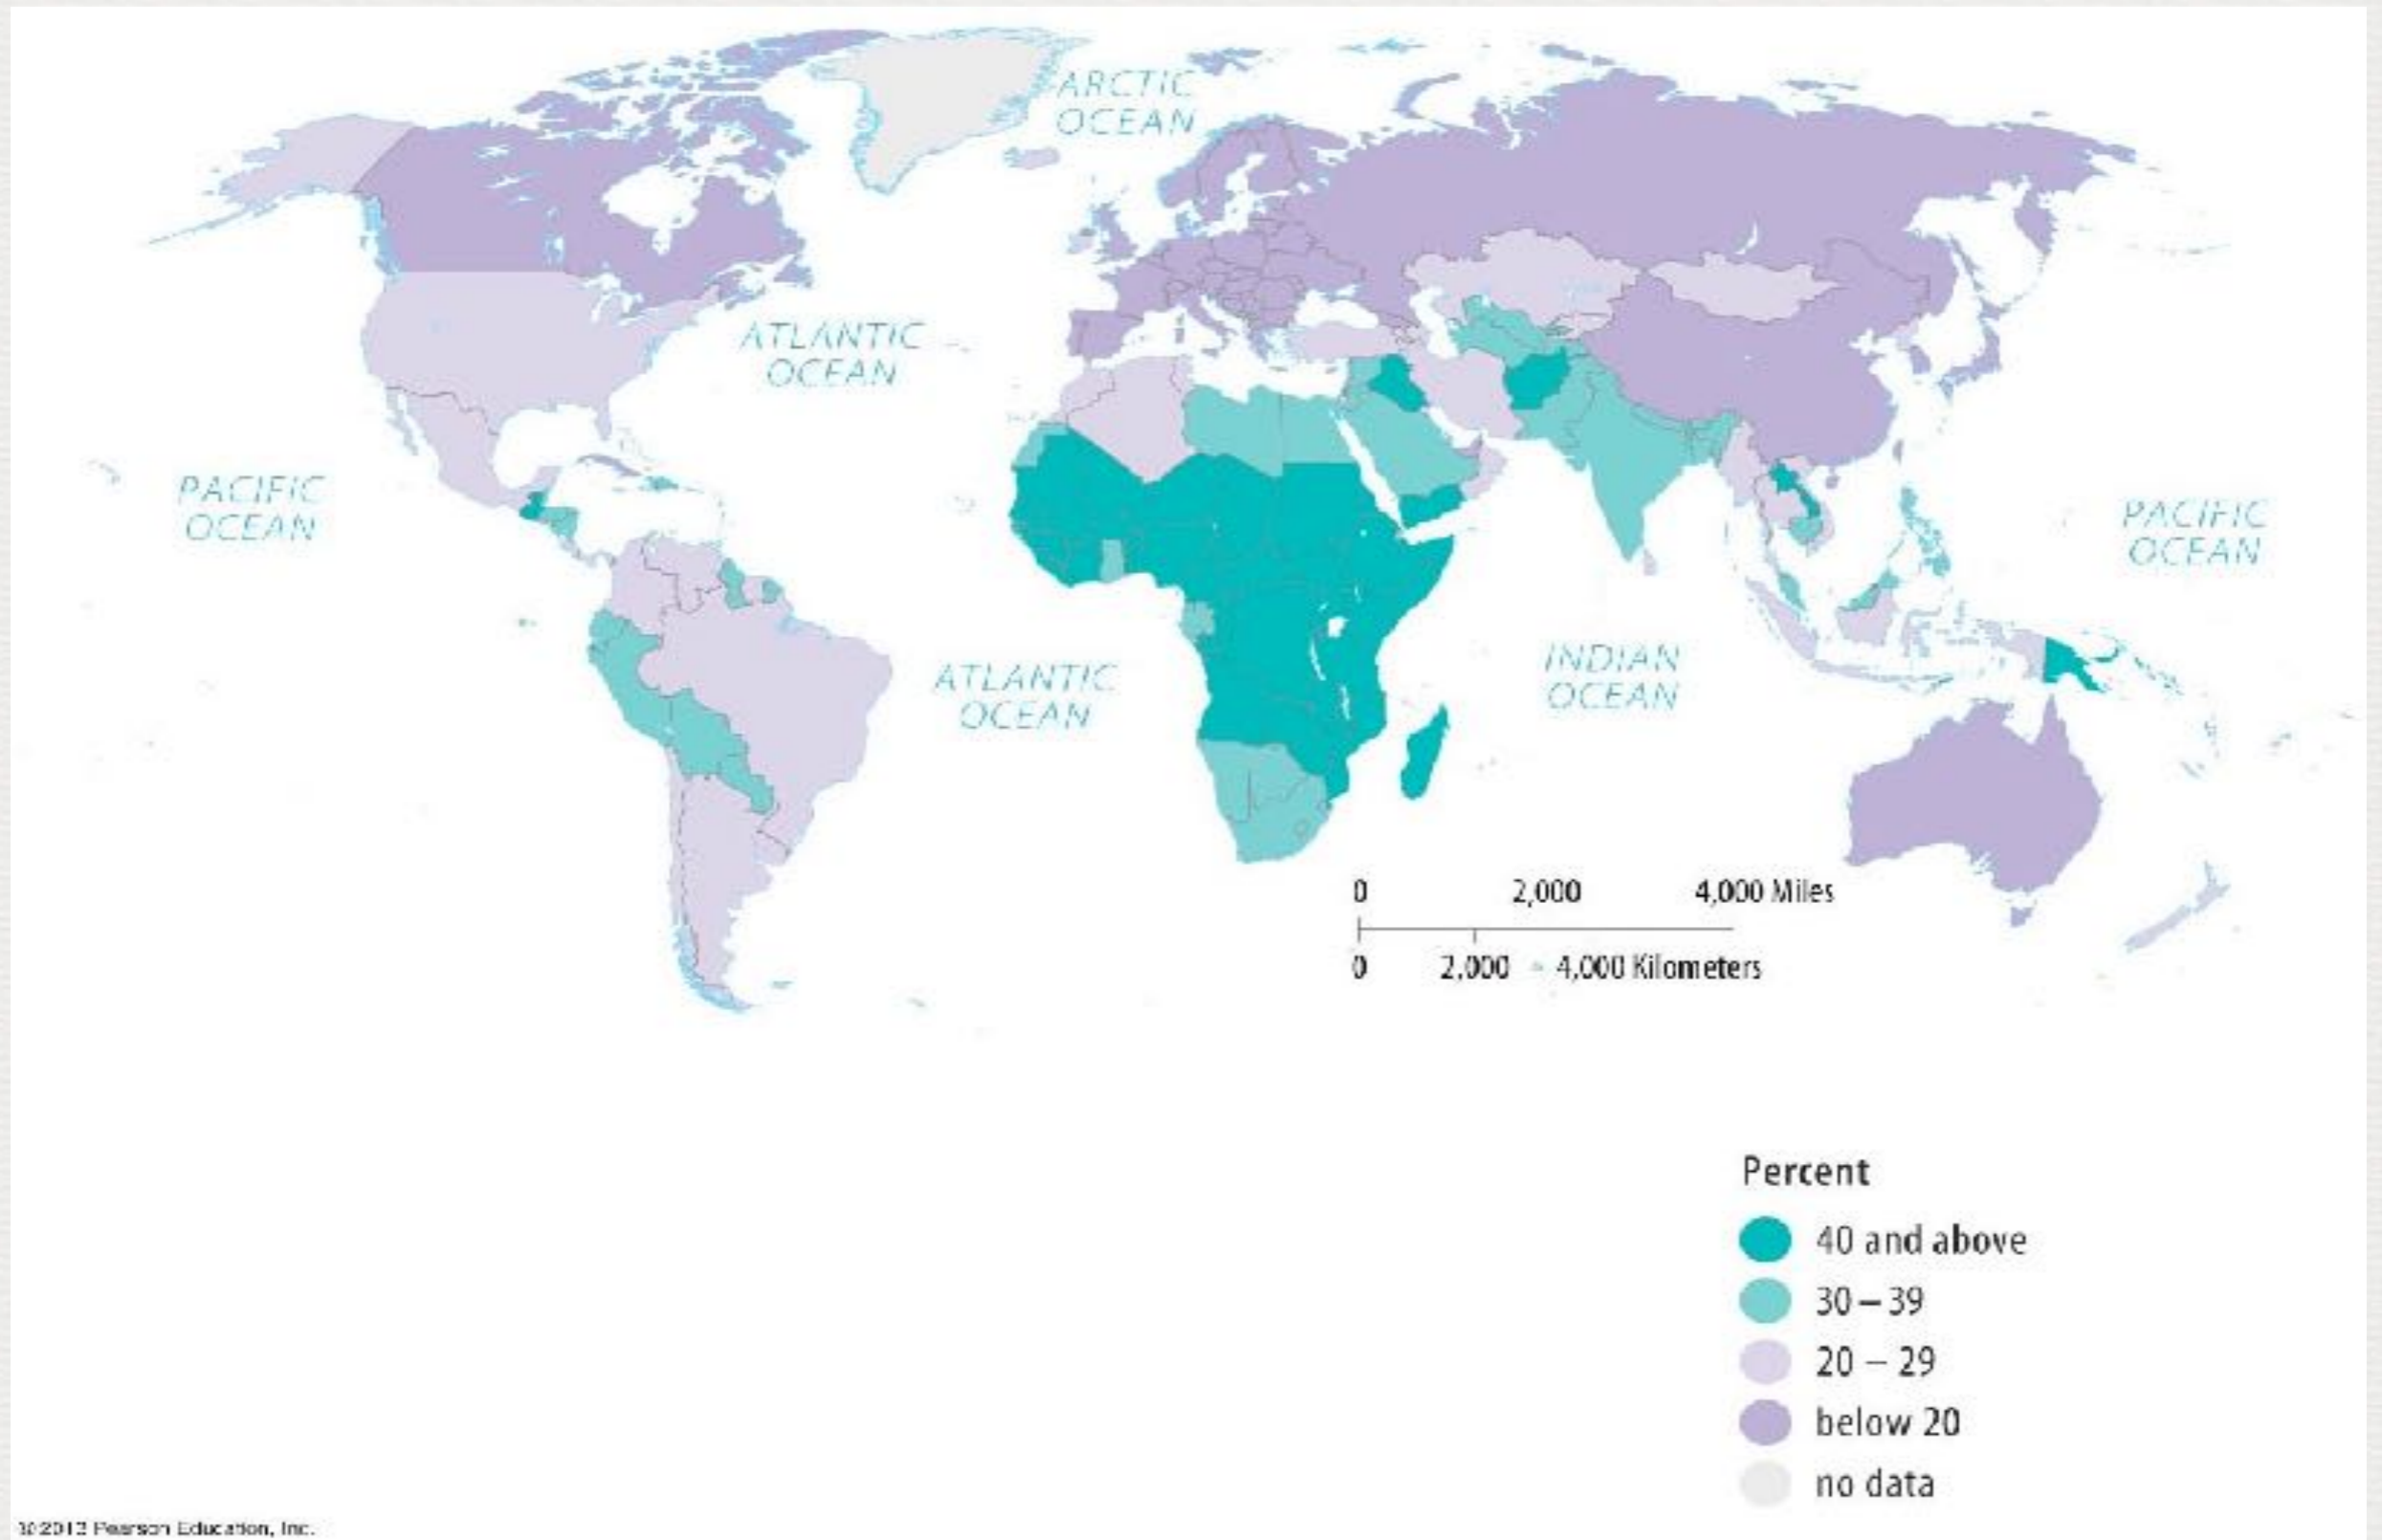

- **C. Young and old**

- 1. Dependency ratio

- a. Number of people who are too young or too old to work, compared to the number of people in their productive years
    - b. Indicates financial burden on a society's productive population

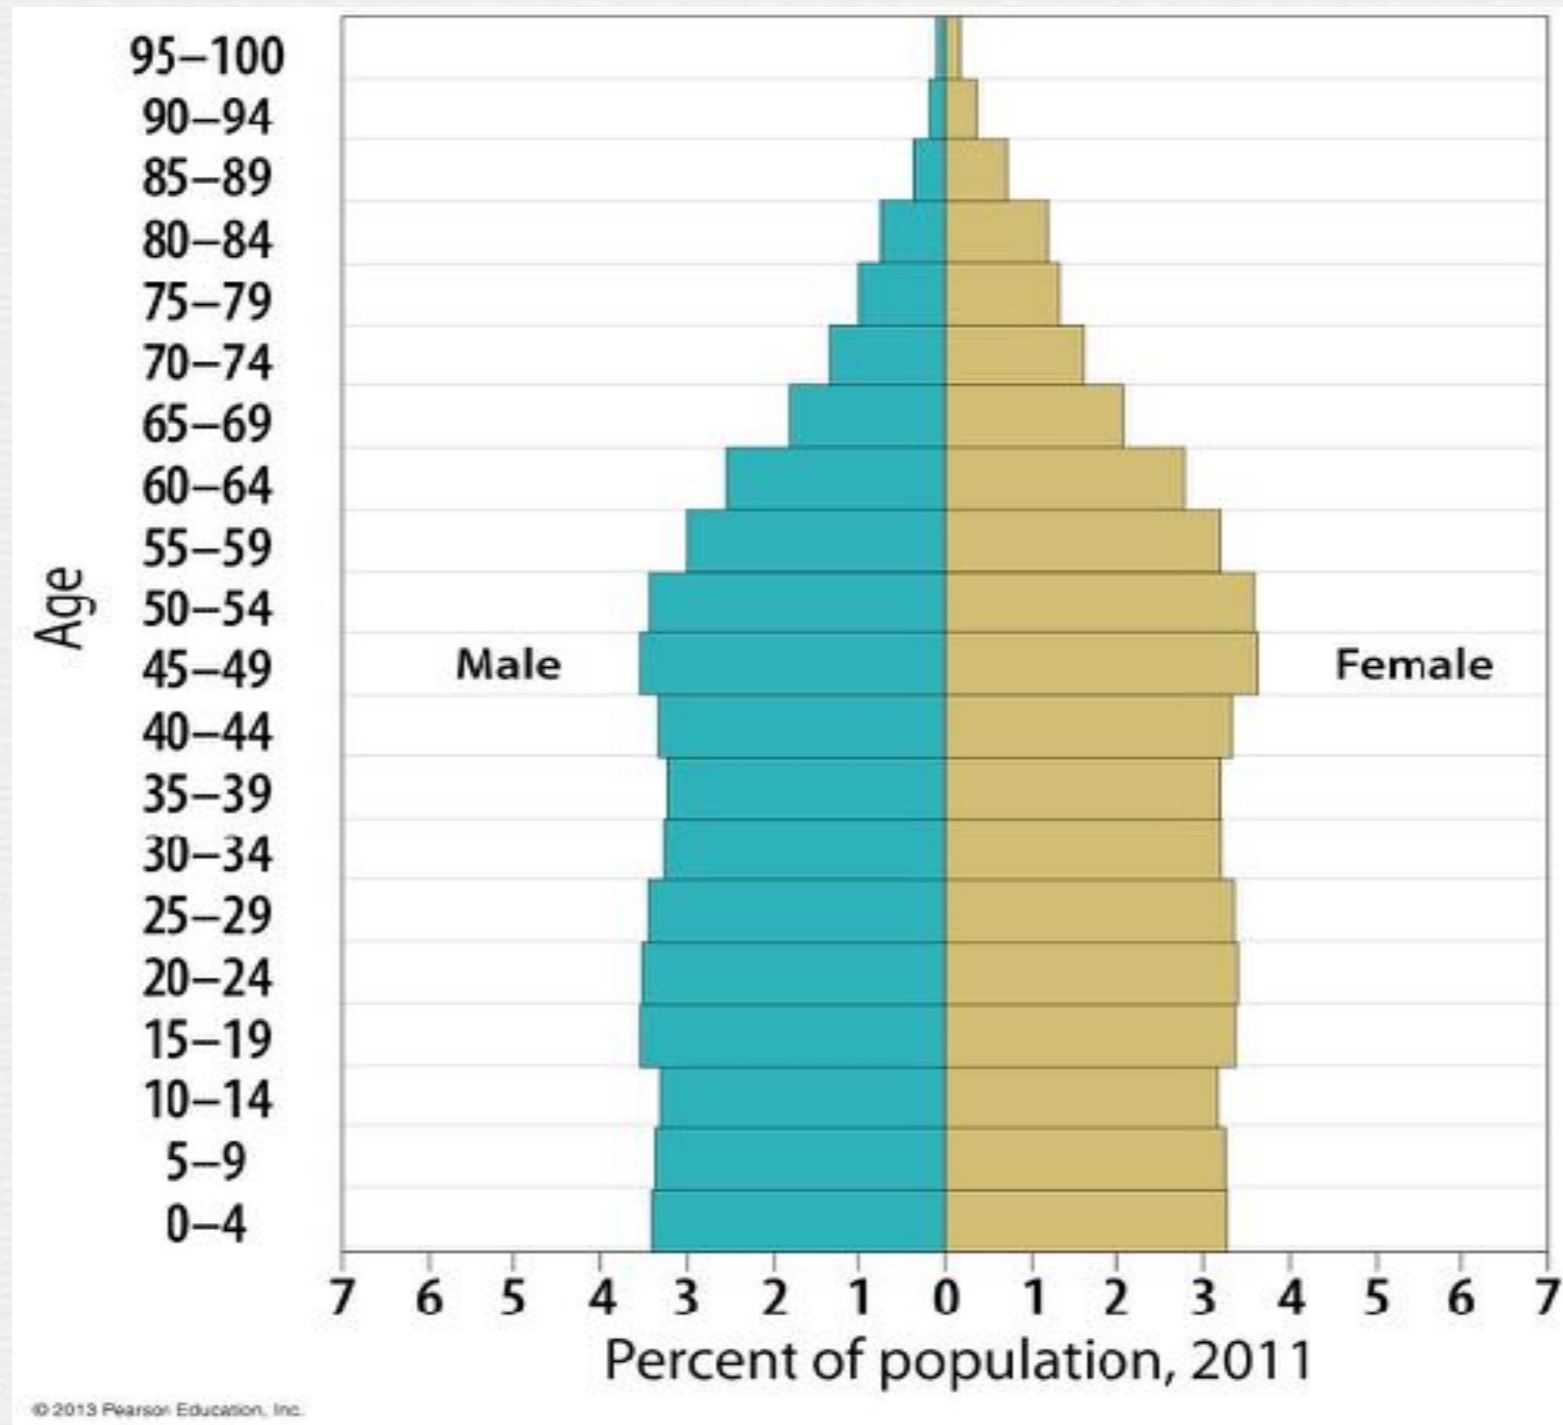

# POPULATION UNDER THE AGE OF 15

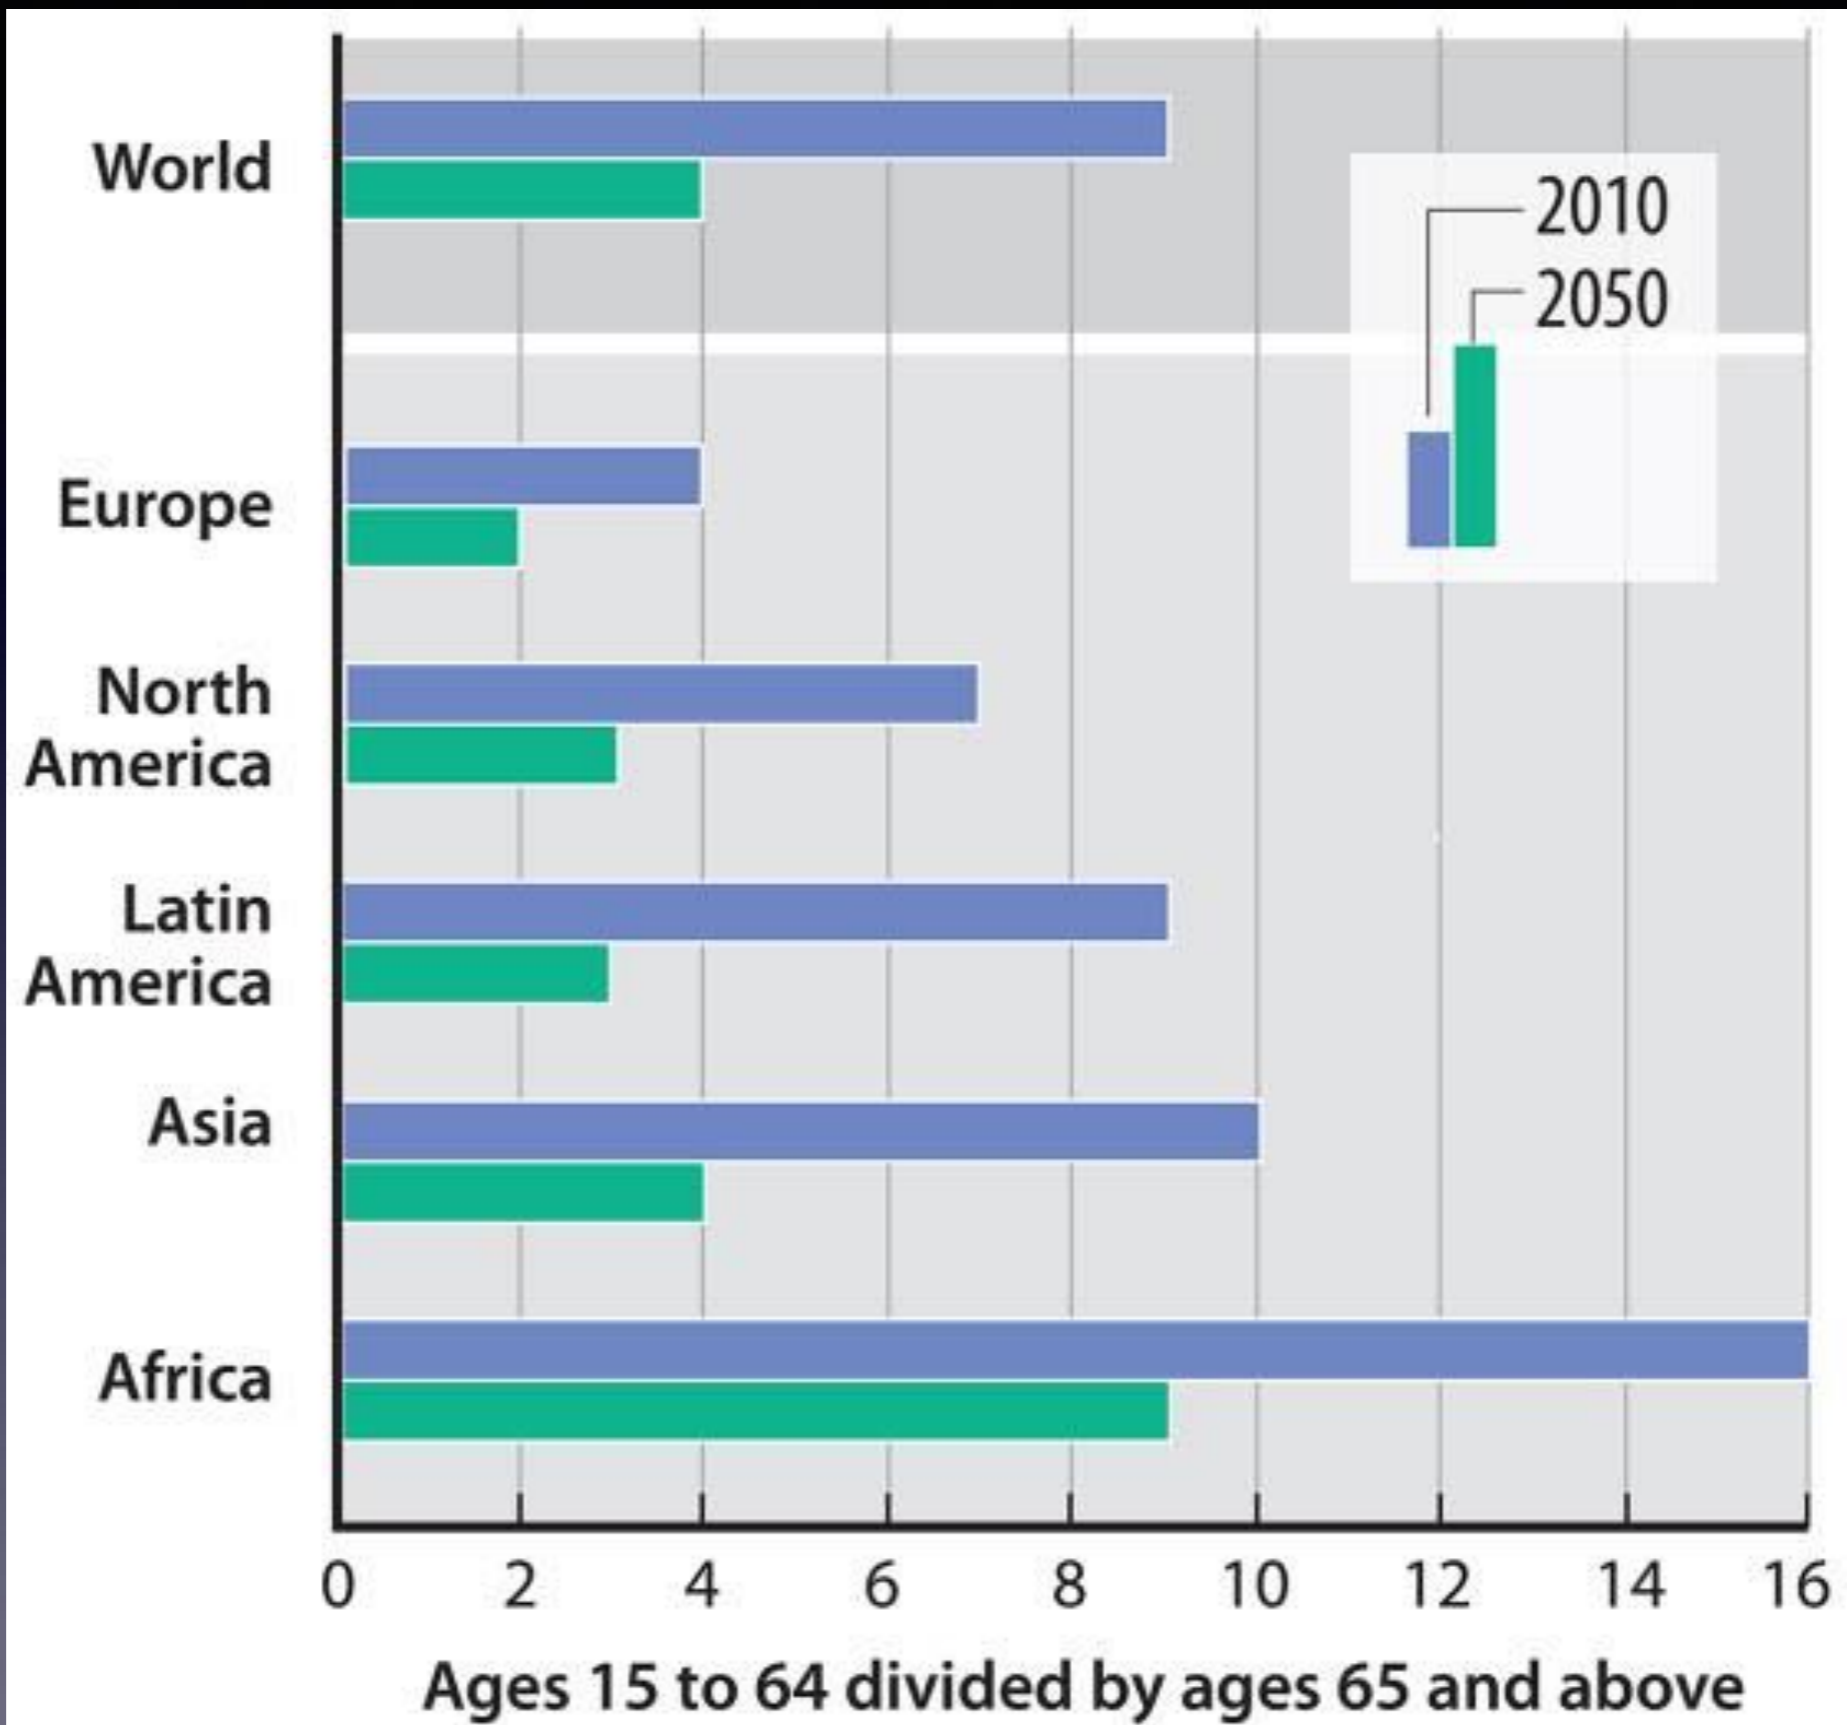

- **D. Population Pyramids**

- **1. A population pyramid is a bar graph that displays the percentage of a place's population for each age and gender.**
- **2. A country that is in stage 2 of the demographic transition has a pyramid with a broader base than that of a country in stage 4.**

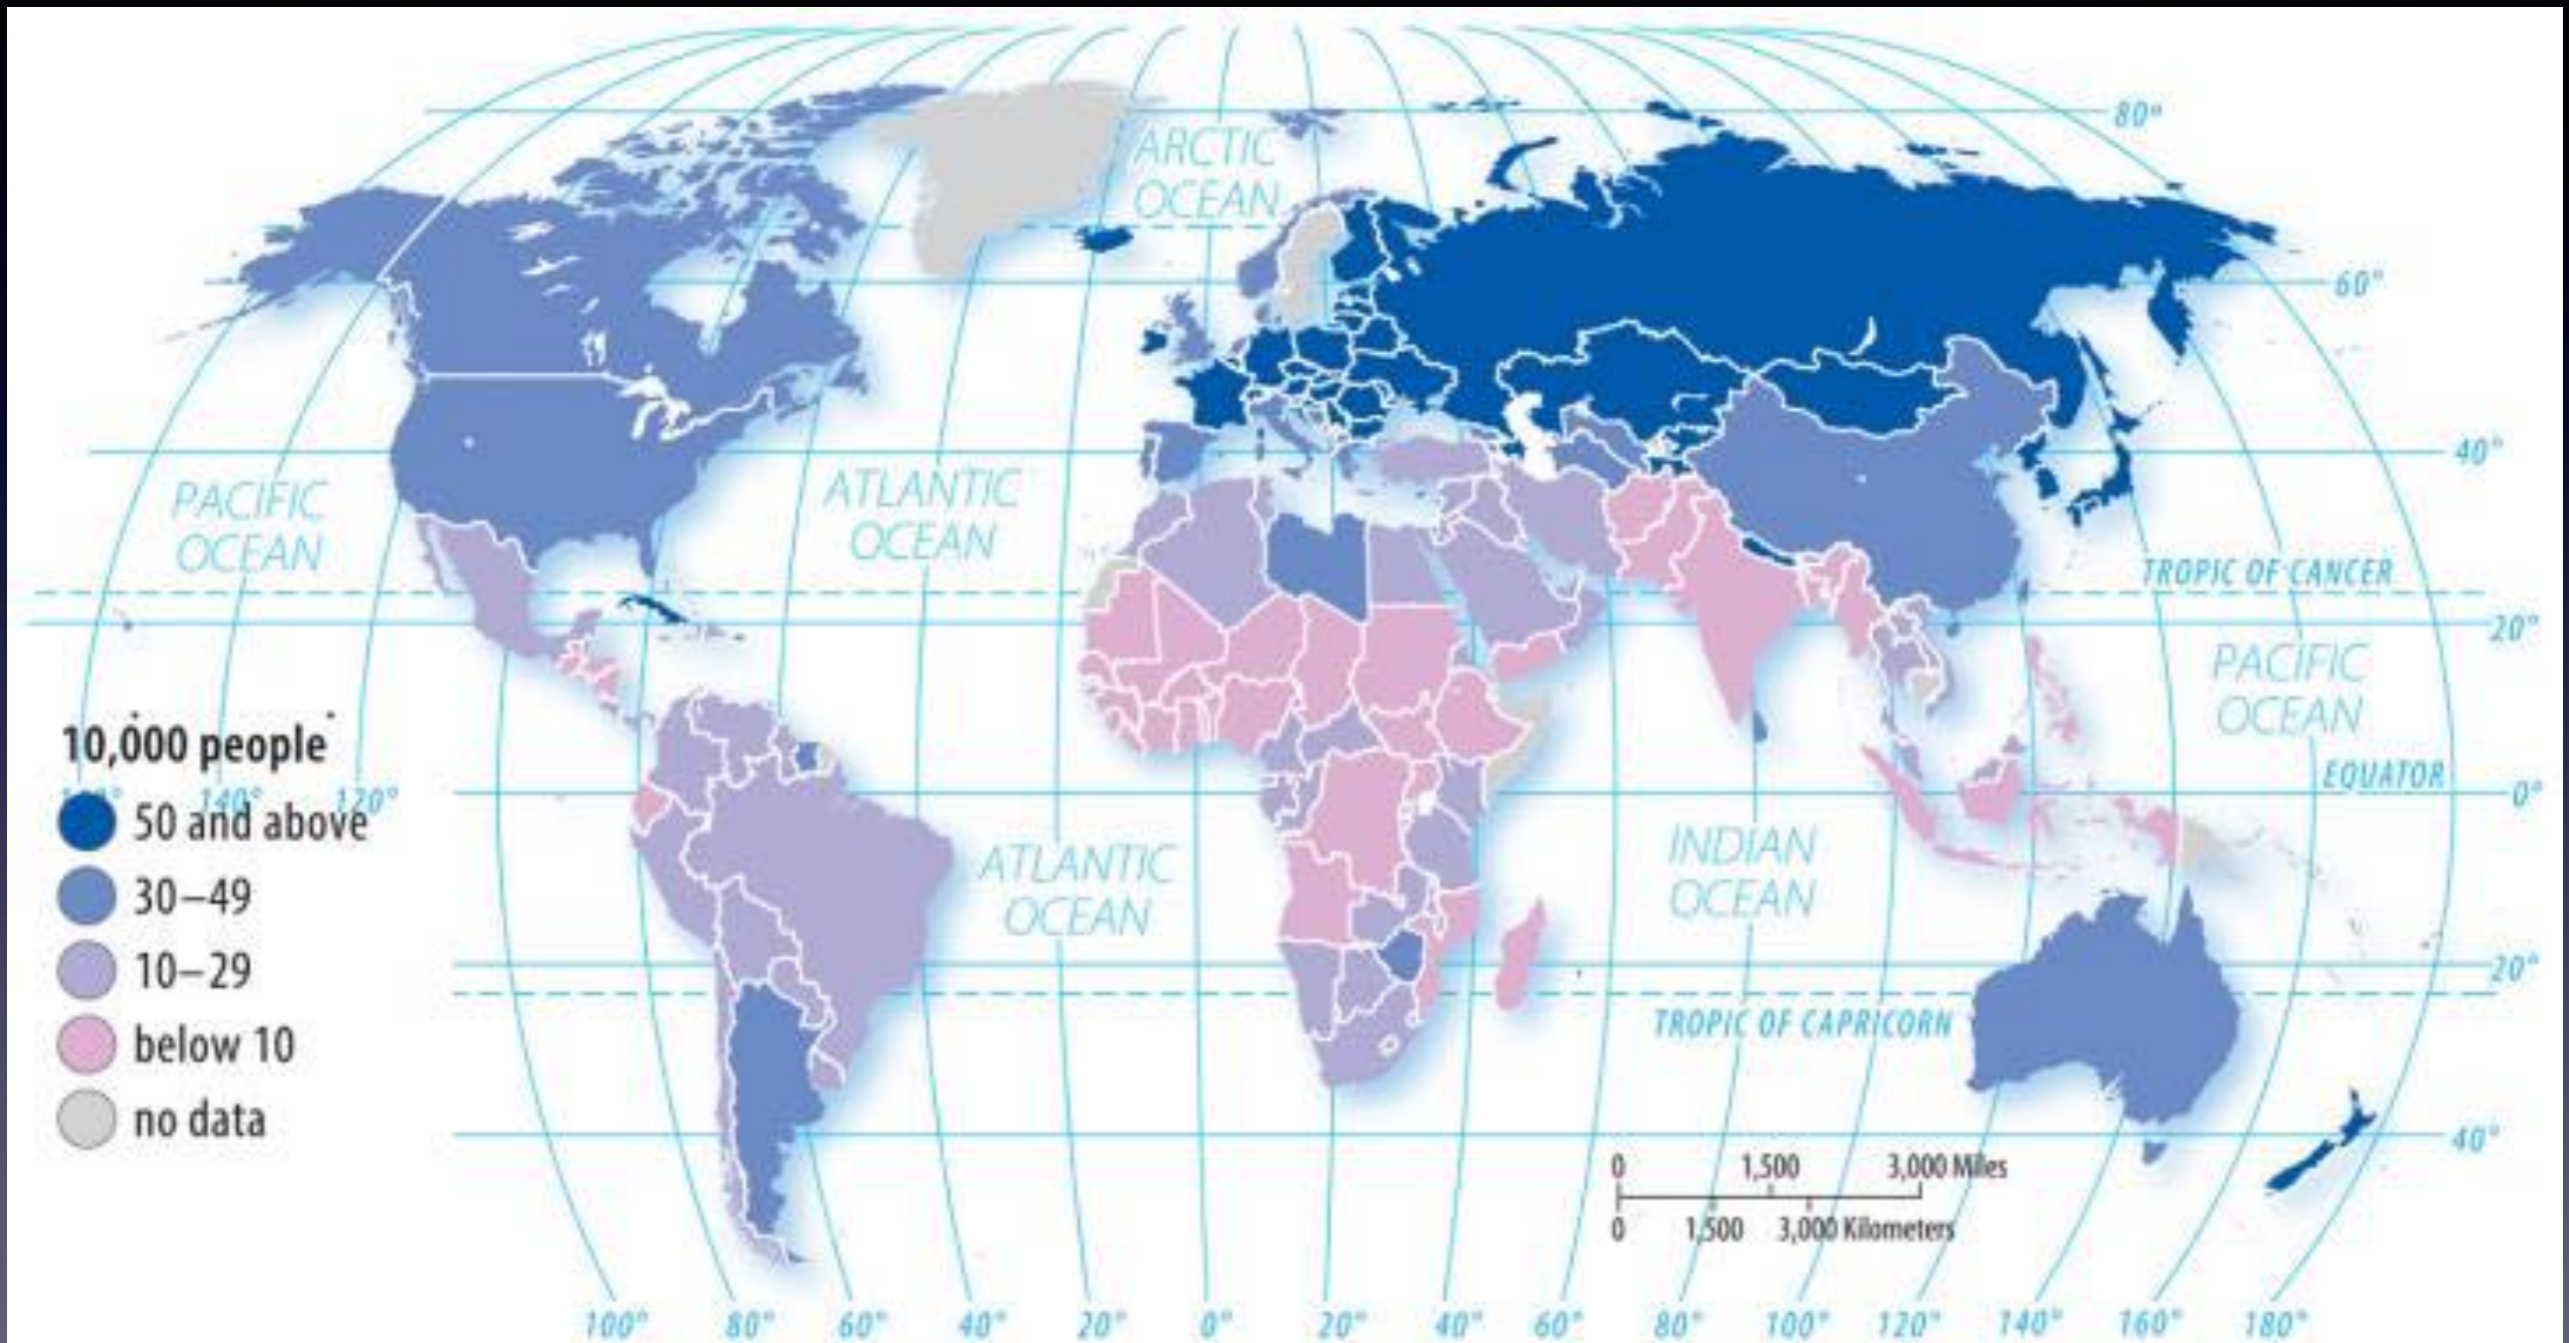

# POPULATION PYRAMID OF THE UNITED STATES

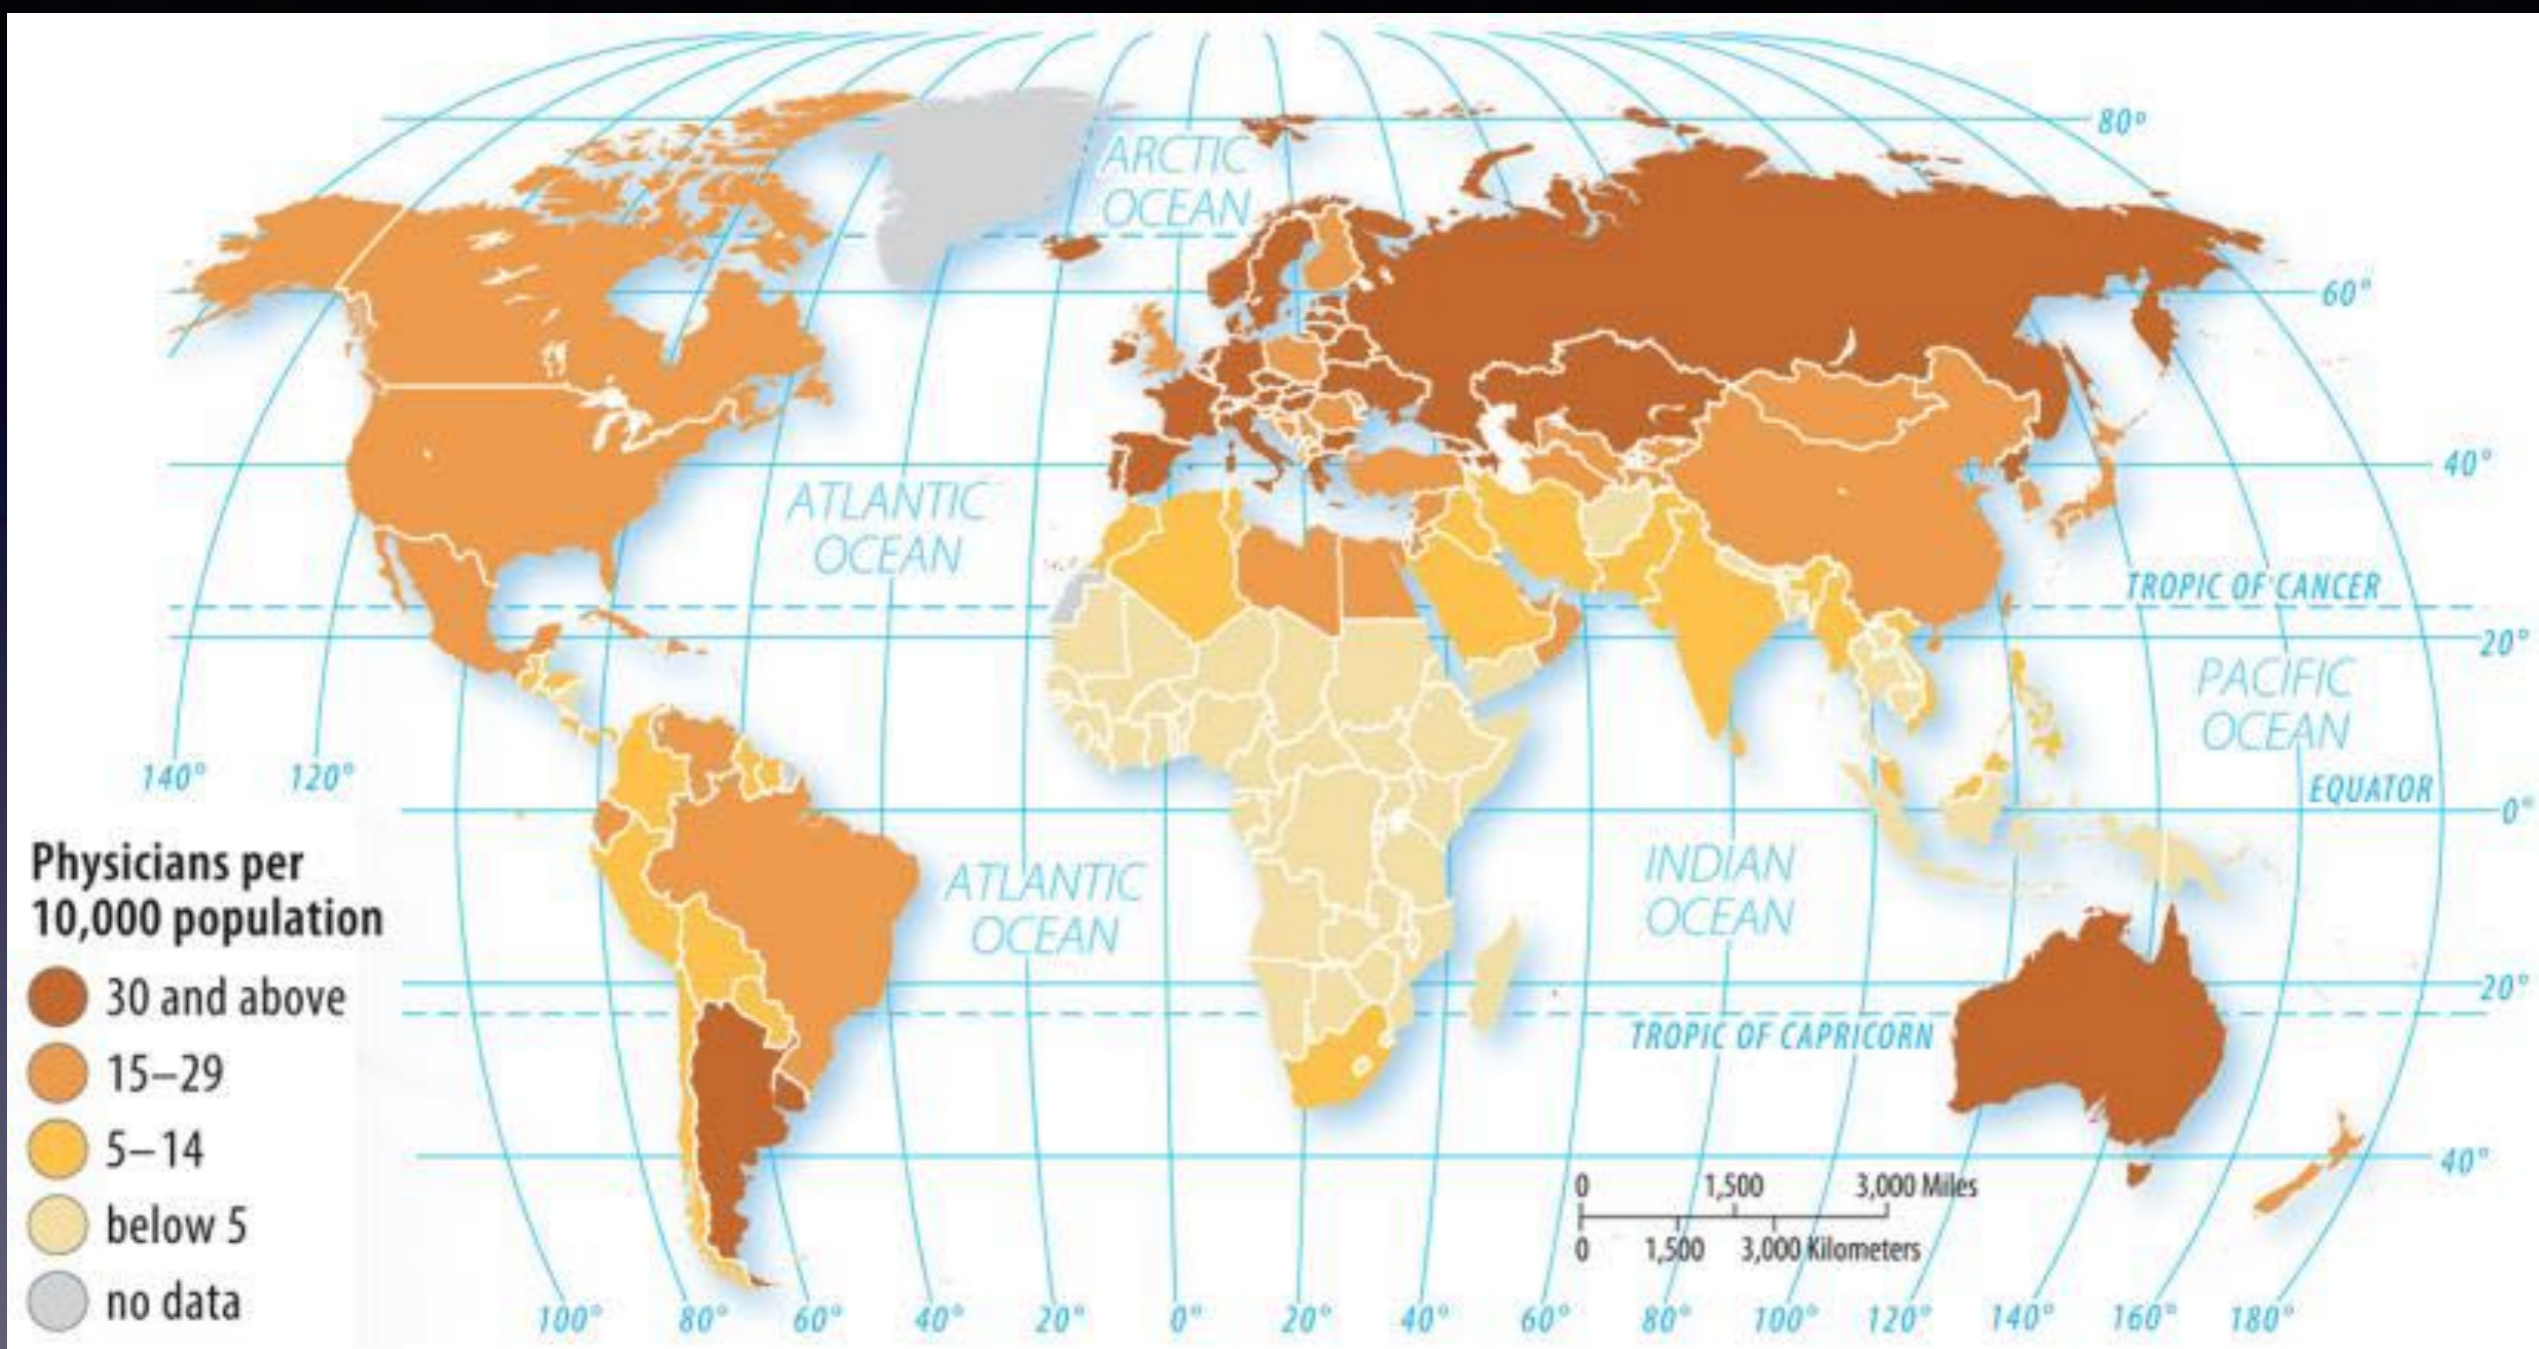

- **E. Medical Services**
  - **1. Most countries in Europe have more than 50 hospital beds per 10,000 people, compared to fewer than 20 in sub-Saharan Africa and South and Southwest Asia.**

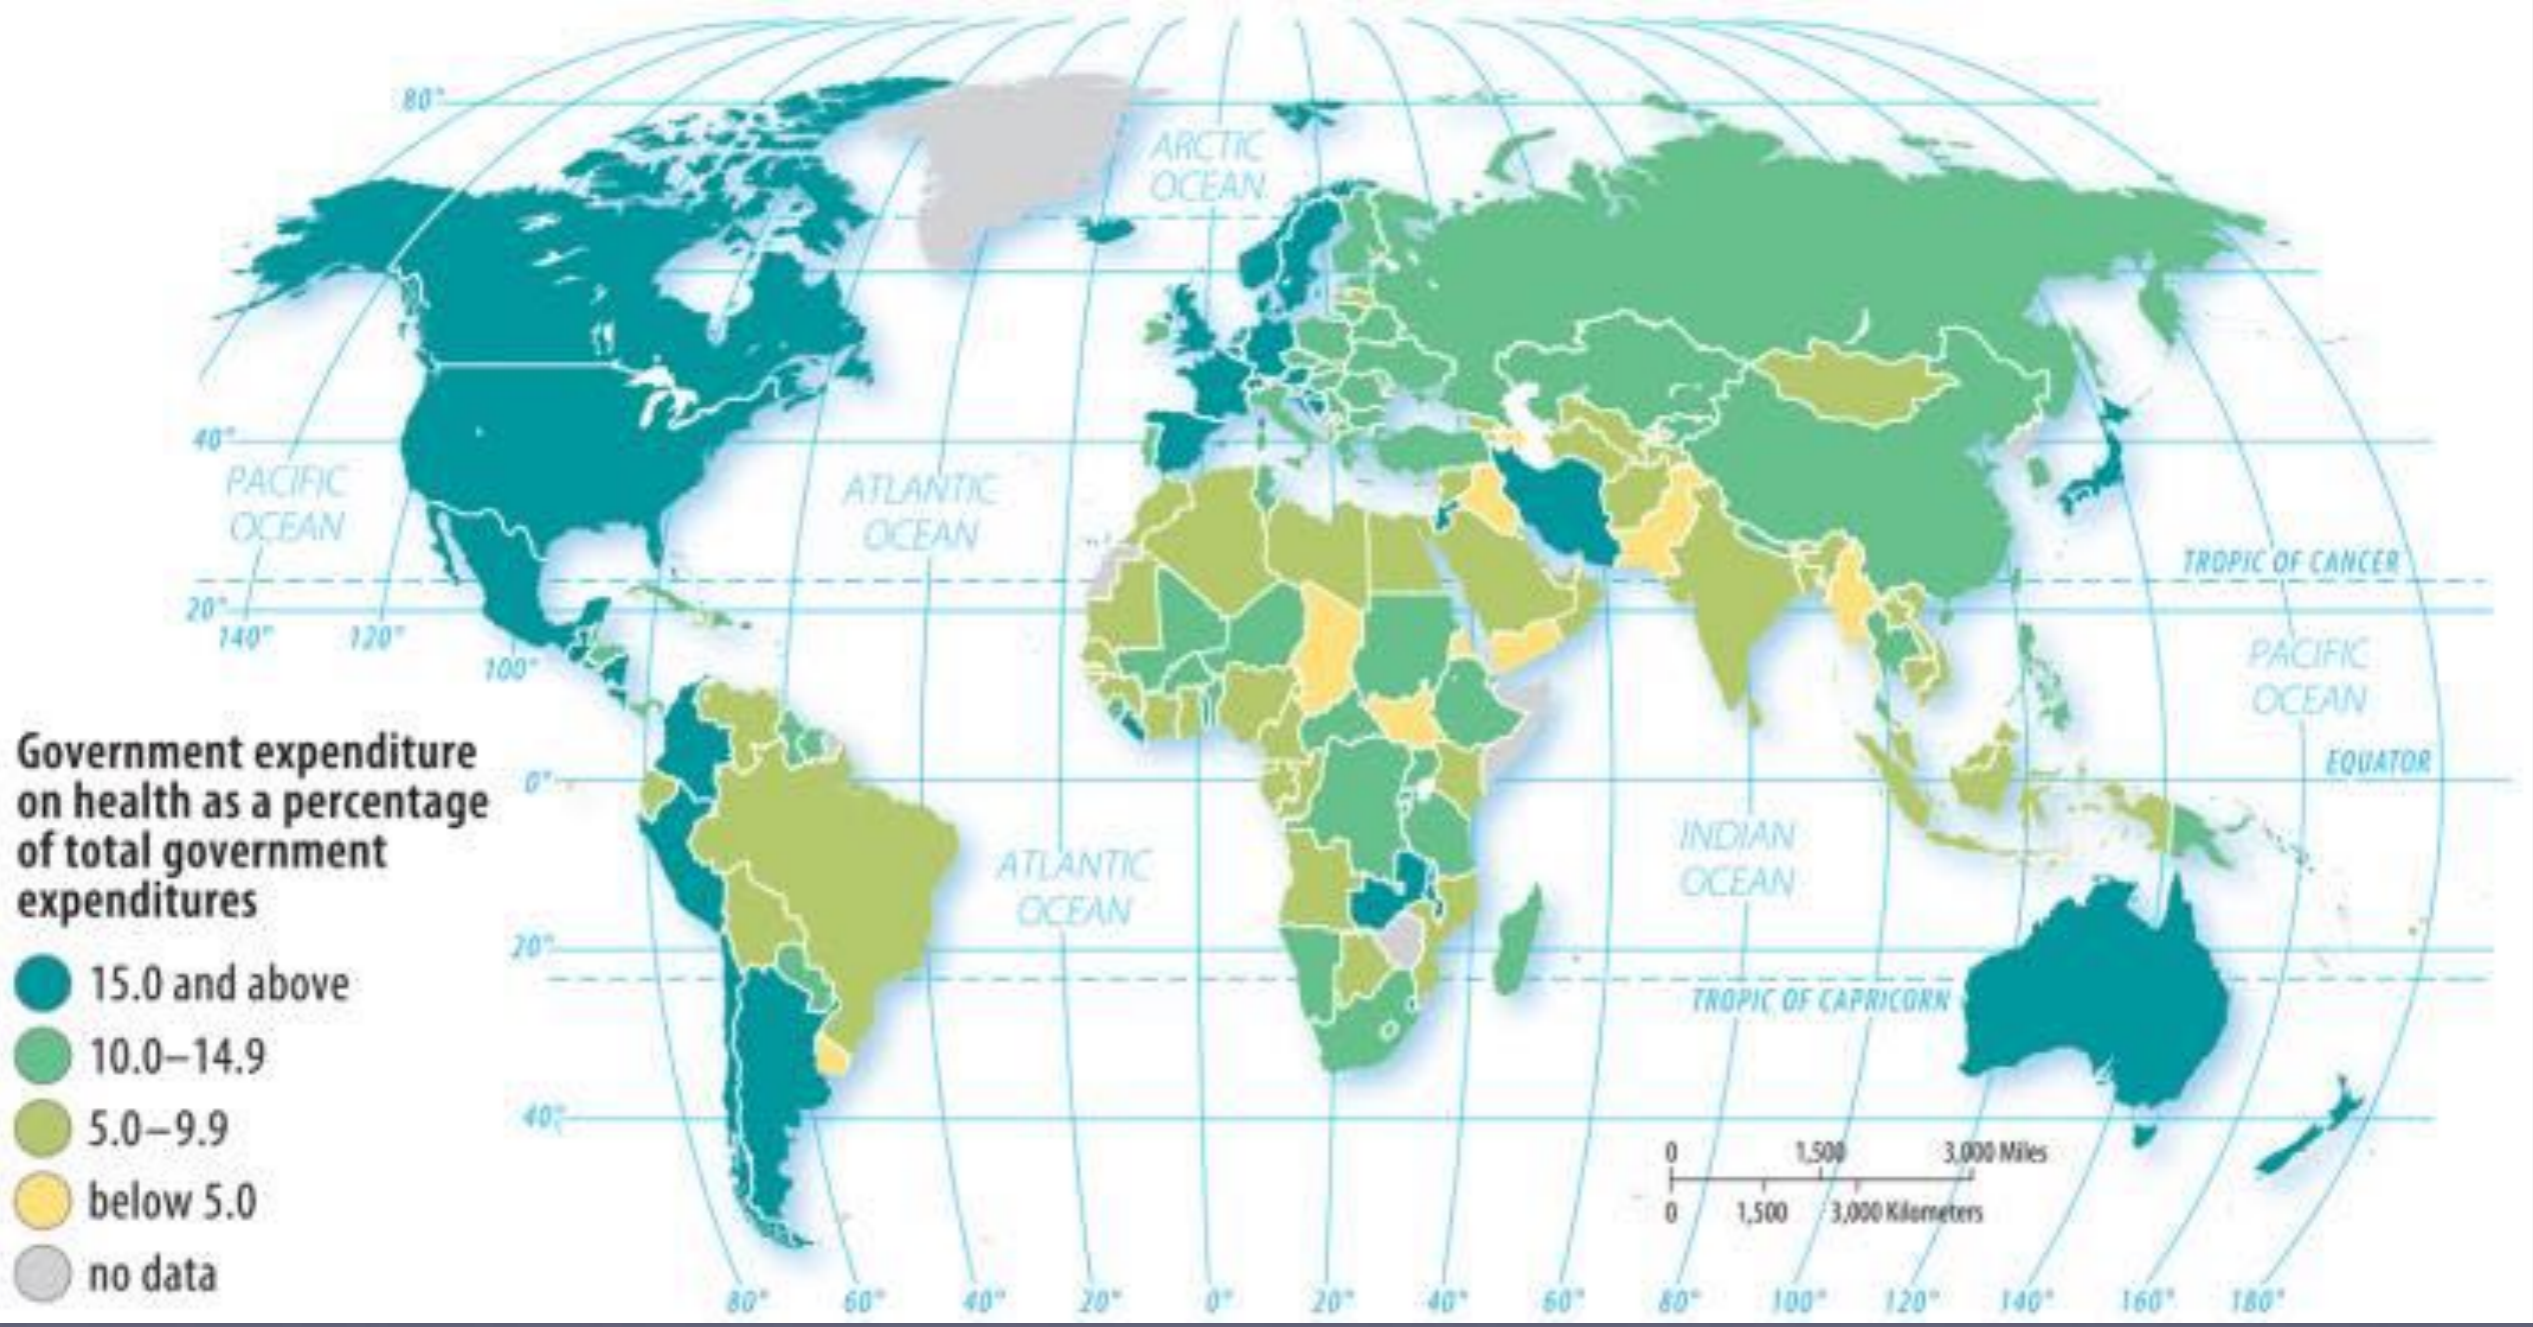

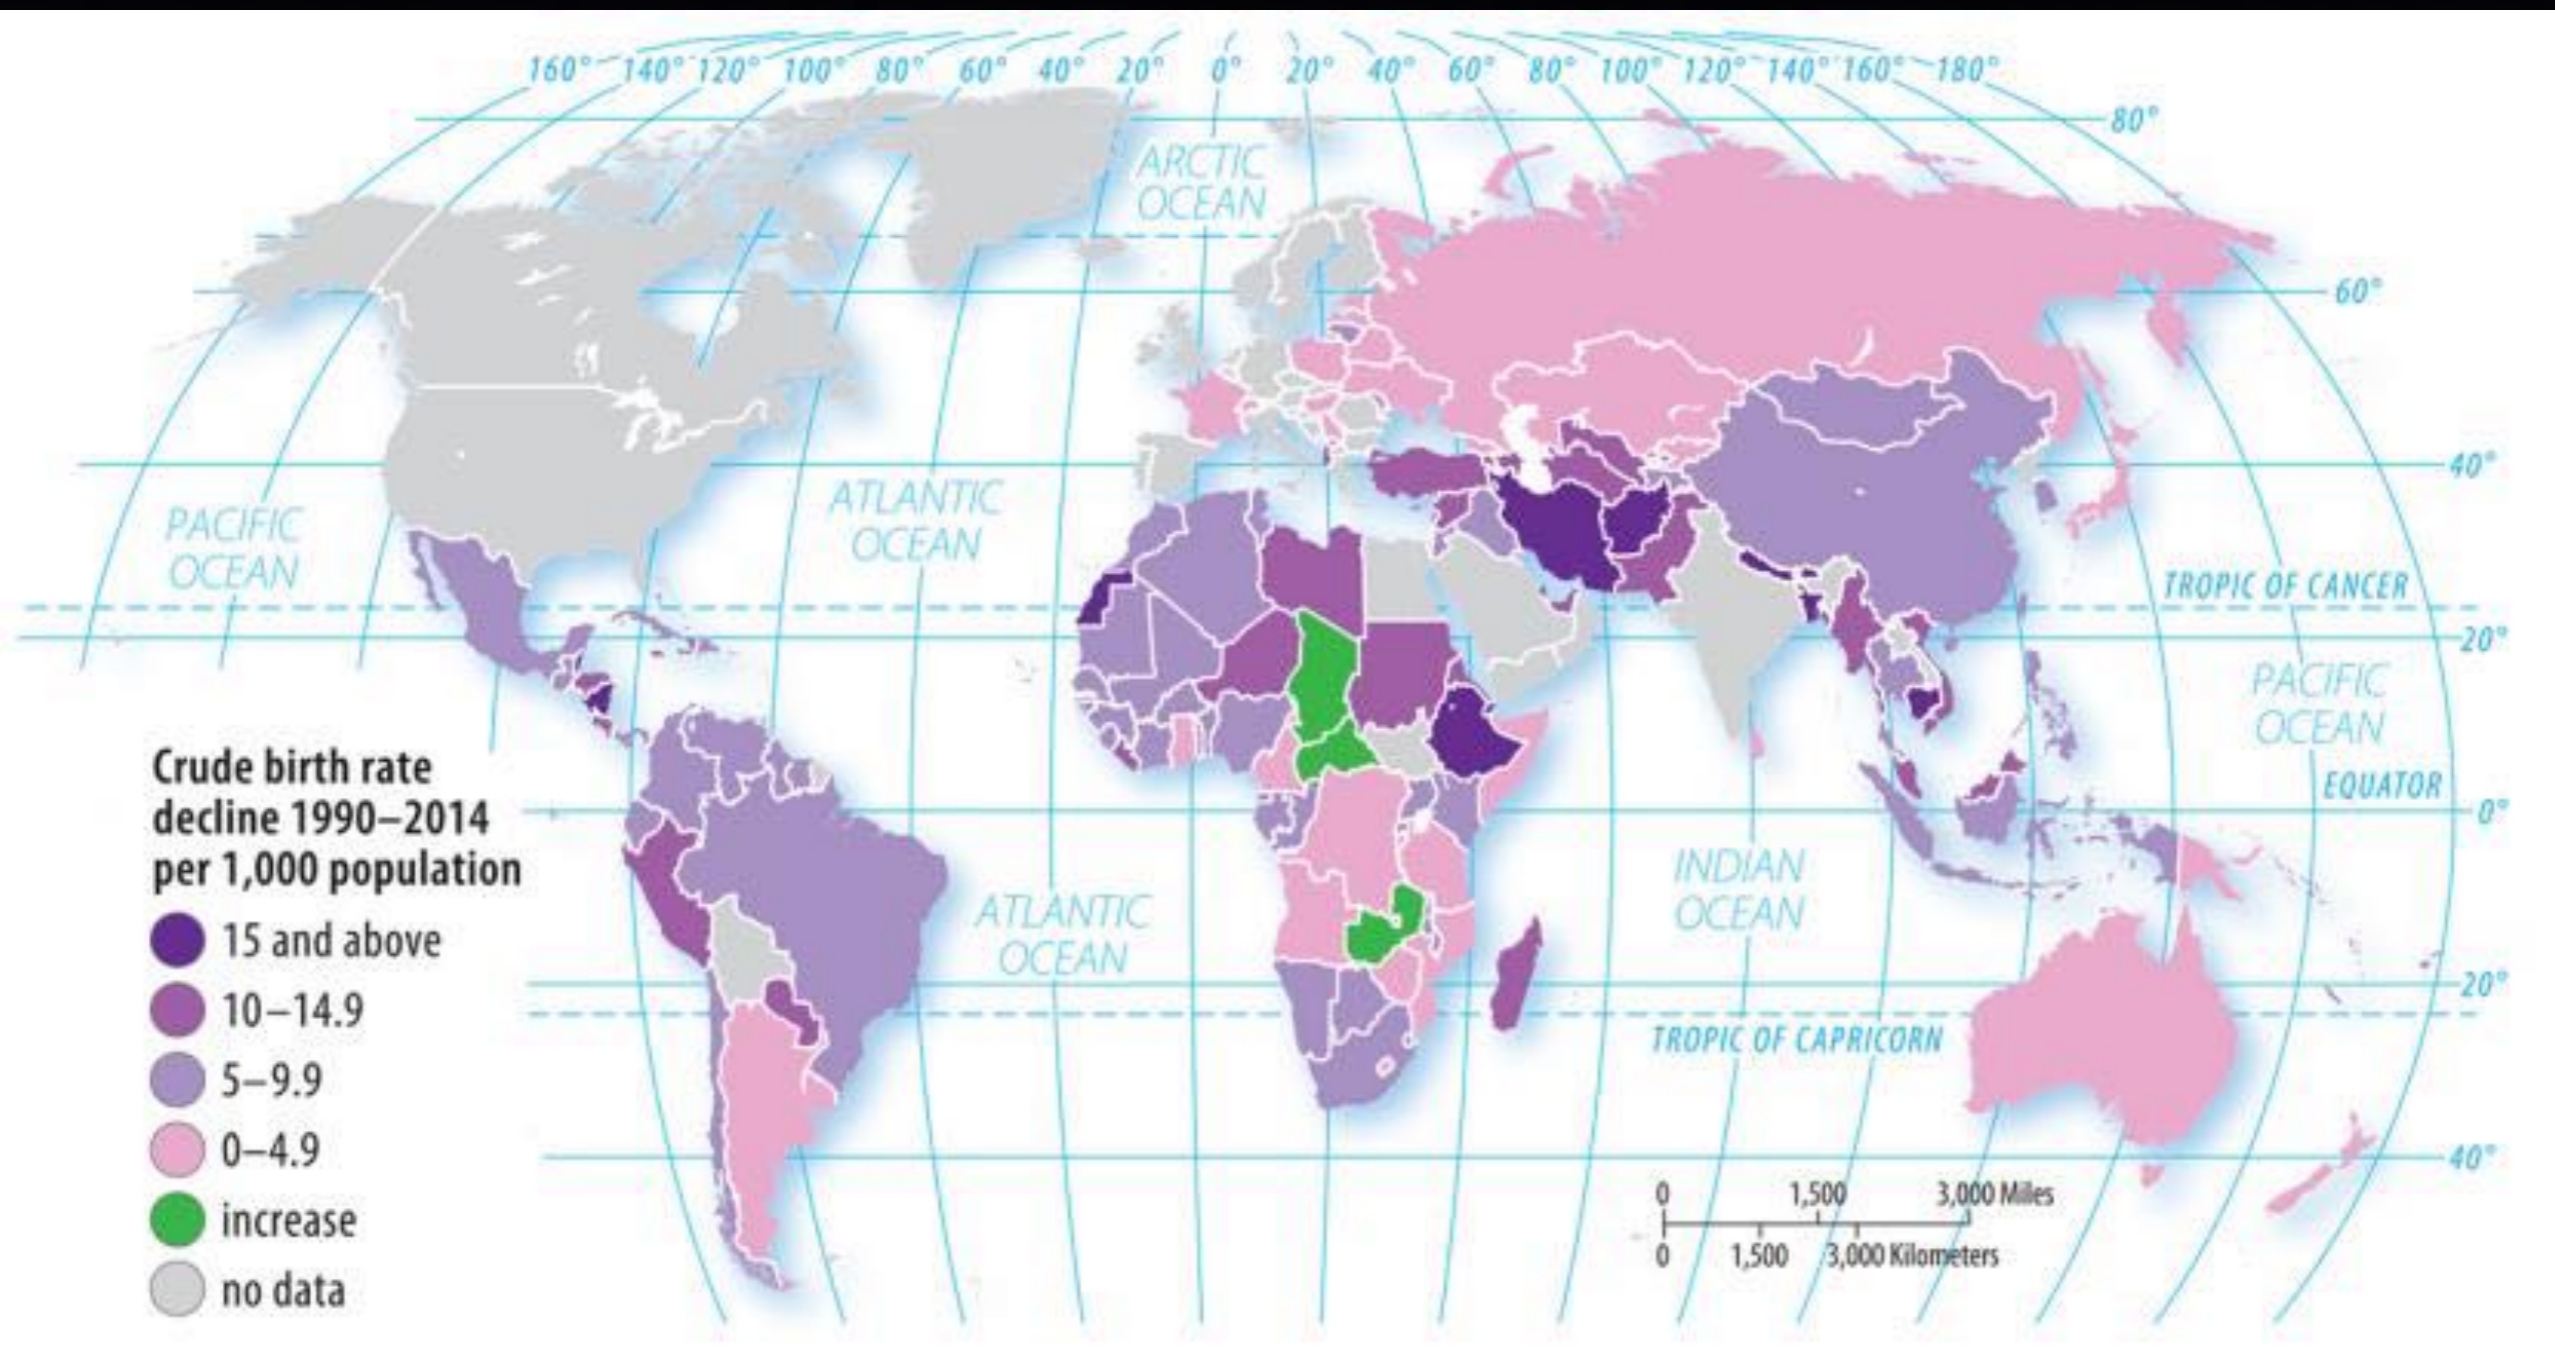

- 2. Europe has more than 30 physicians per 10,000 population, compared to fewer than 5 in sub-Saharan Africa.

- **3. In the United States, private individuals are required to pay an average of 55 percent of health care, more closely resembling the pattern in developing countries.**

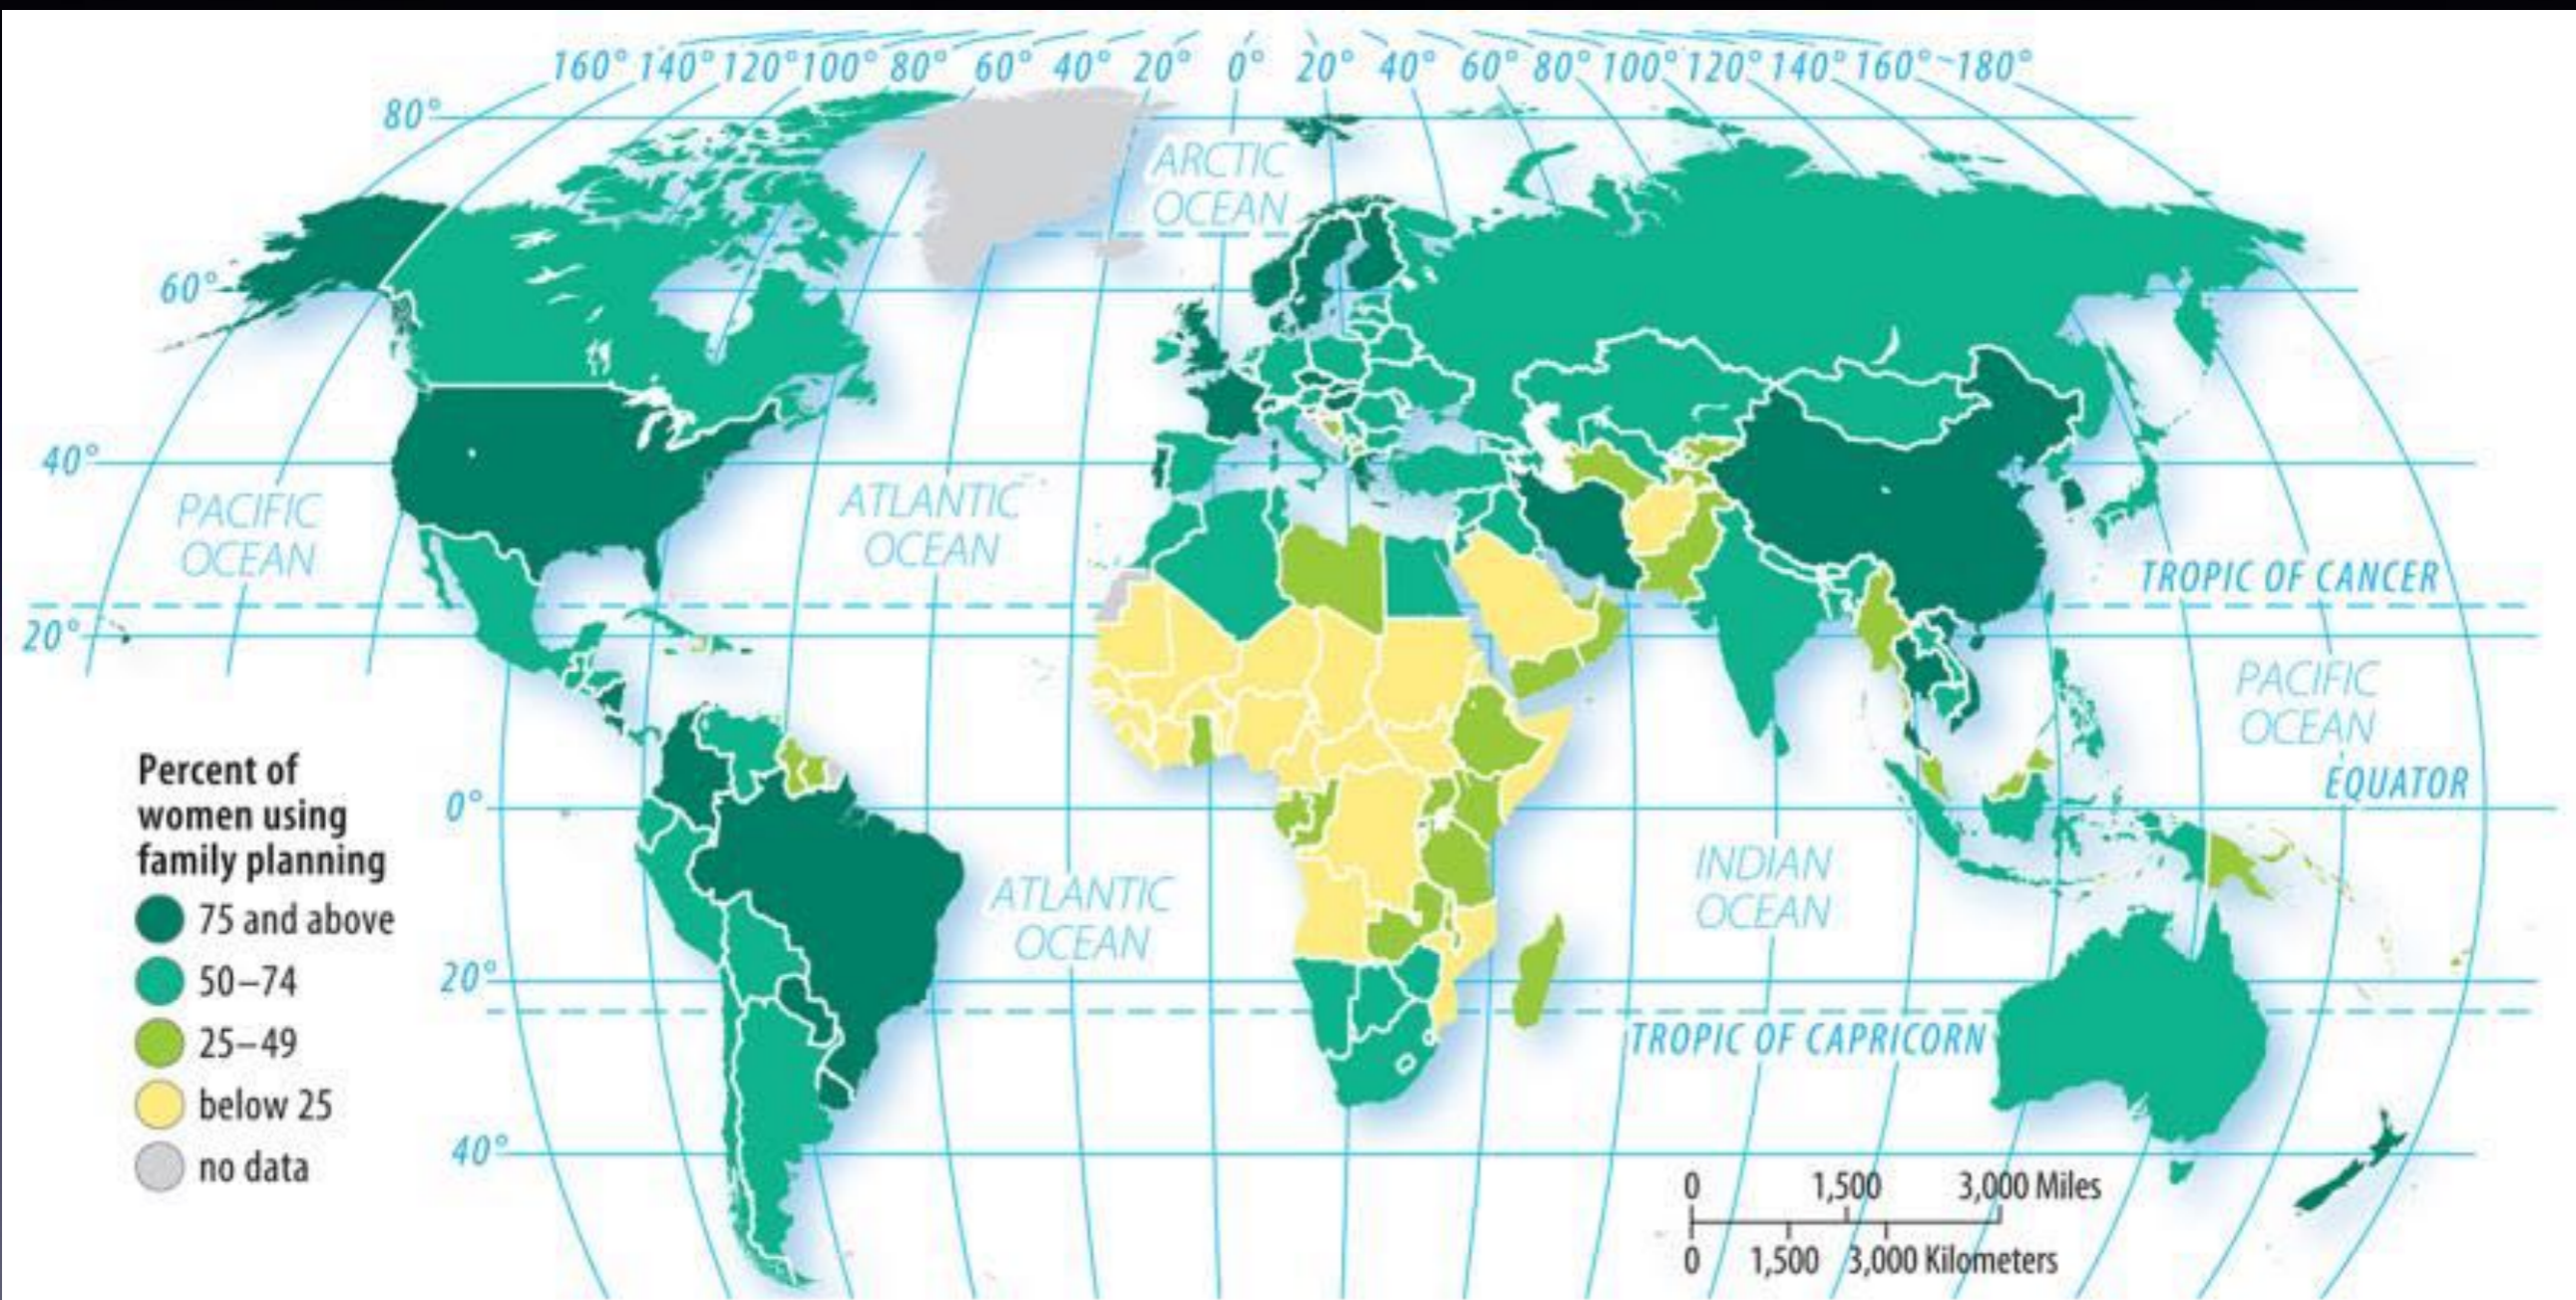

- F. Reproductive Health
  - 1. The CBR has declined rapidly since 1990, from 27 to 20 in the world as a whole and from 31 to 22 in developing countries.

- 2. Two strategies have been successful in reducing birth rates: improving economic conditions and contraception.
- 3. Economic development may promote lower birth rates in the long run, but some argue that the world cannot wait around for that alternative to take effect.

- 4. In some developing countries, demand for contraceptive devices is greater than the available supply, so the principal family planning strategy is to distribute contraceptives cheaply and quickly.
- 5. Many oppose birth-control programs for religious and political reasons.

**Percent of women using family planning**

- 75 and above
- 50–74
- 25–49
- below 25
- no data
